I'm going to assume that you are a designer, not an AutoCAD Free Download user, so if you need more information about AutoCAD, consult the FAQs that I linked to in the beginning of this page. As I was designing this page, I was thinking that if I were looking at a model that I was building, I'd want to show a zoom of the part I'm currently working on so that I can get a better view of what I'm working on. Zoomed model views are very helpful in several ways, and I think they are especially helpful for designers. Zoom levels, or Levels In AutoCAD, there are several ways of "zooming" a model view, and they all involve "zooming in" to some portion of the model (the model's coordinates are usually in the form of "Coordinates=X,Y,Z"). There are three levels of zoom, from the outermost to the innermost: Level 1: This is the default level of zoom. You might use this when you want to see the entire model, but you're not exactly sure what you want to see. You might want to zoom in enough to see the full model, but not so much that you see all the individual components. I would usually use Level 1 when I'm looking at a model as part of a larger design project. I would usually zoom out to the first level when I'm finished looking at the part of a model I'm working on, so that I can get back to working on my next step. Level 2: This level of zoom is the same as Level 1, but in addition to the full model, you also get a view of the layers of the model. This allows you to view the individual layers that make up the model. Level 2 is normally what I use when I'm building a model from scratch. I'll create all the layers, mark them with the levels I want to use, and then I'll start doing construction. You can make the view of the layers any size you want, although the default is approximately double the width and height of the model. For instance, if the model is 1000 units wide by 1000 units high, the default view of the layers will be 2000 units wide by 2000 units high. Level 3: This level of zoom is similar to Level 2, but you also get a view of the text properties of the model. This allows you to see the names of the
