AutoCAD is the world's most popular commercial CAD program. In 2018, the program had 10.2 million active users. As of 2014, AutoCAD had 2,337,294 registered users, 1,879,659 active users and 4,216,181 subscriptions. AutoCAD has been developed for the PC and the Mac. At the 2018 VDC conference, a new AutoCAD 2020 was announced. At the time, it was not available for use, and its features were in a development stage. Contents show] History AutoCAD was created in December 1982 by Ed Catmull and the Iowa State University Graphic Arts Center for the Iowa State University's Computer Graphics Research Laboratory, with Ed Catmull as the primary developer. The program was released in beta versions in June 1983. By November 1983, it was released as version 1.0 for the IBM PC. In June 1985, version 1.1 was released for the Apple Macintosh. The original version of AutoCAD sold for \$995. In 1983, in order to compete with the heavy computer equipment used by the already existing CAD industry, Catmull hired a team of computer artists to work on the next version. Their first goal was to reduce the size and expense of AutoCAD, and they released version 2.0 in 1985, which was considered successful. In 1986, version 2.1 was released, along with the introduction of the first direct linked files, a system which allows an object to be linked to its definition. In the same year, Autodesk introduced the DWG (Drawing) format, which would replace the old DCF (Define) format that was used for the previous versions of AutoCAD. In 1987, version 2.5 was released, along with the PostScript and Windows versions of the software. Version 2.7 was released in 1989, along with the introduction of the raster image, which caused the application to have a dramatic shift from vector-based CAD to raster-based. In 1994, version 3.0 was released, along with the introduction of PDF and HTML work files, which caused the program to have a complete change of direction. In 1995, version 3.5 was released, along with the introduction of the format for Windows. In 1996, the first iteration of the object-based AutoCAD was released, which caused a

Mama Nature Yesterday I took my trash out for the first time in over two weeks. And I walked to the bin, collected the bags, and stood in front of the garbage can. I just stood there. For a good long time. I went outside, folded the bags, put them in the trash and went back inside. Took a shower, washed my hair, made dinner, cleaned up after dinner, did dishes, went to the bathroom, lay down and looked at the ceiling. That was all I could think to do. It felt like I was taking time out from my life. It felt like I was putting something away. Getting ready to go out into the world.

I felt like a transitional person. A “girl” and “woman” who can go outside, do the trash, and do it all again the next day. But I realized that it’s still time for me to be a real girl and a real woman. It’s time for me to be ready to live. So I got up, turned on the lights, turned on the radio, turned on the TV, turned on the computer, put on some clothes and made myself a cup of coffee. Then I went into the living room and sat on the couch with a blankie on my lap. Turned on the television and put the box with AFI and
