History In the late 1970s, three developers from Honeywell Information Systems, Russ Rader, Larry Tanner and Lou Hasenau, had developed a commercial 3D plotting system called "HELIOS", which had pioneered the use of vector-based graphics. The system was initially sold as a plotting/editing system called "MAP", which mapped out, edited and printed 2D/3D map data. It was these three developers that formed the original core team

of Autodesk that in 1982 introduced the first commercially available CAD package. The original program was originally named "Map Designer" and was the first to incorporate 3D graphics. The software was developed and initially marketed by Autodesk, which then formed a new subsidiary called Hydraulics Group, which created the first AutoCAD Serial Key in December 1982. The first release of AutoCAD was called "AutoCAD-Map Designer", and was a desktop app. The first release was successful, and a year later the first CAD suite and 2D drafting product called AutoCAD R14 and Map Align was released. It was the first CAD package that supported both 2D and 3D graphics. In 1987, the first version of AutoCAD to support both 2D and 3D drafting was released and named "AutoCAD-Map Designer II". The release was marked as AutoCAD R16. The first release of AutoCAD for the PC was named AutoCAD-Map Design III in 1990. It was the first to support integrated graphics on a PC. The first release of AutoCAD for Mac was named AutoCAD-Map Design IV in 1991. It was the first to support 3D graphics in the Mac. AutoCAD Workbench was introduced with AutoCAD-Map Design IV in 1991. The Workbench allowed multiple AutoCAD instances to run on a single computer. In 1991, AutoCAD Professional was released to the general public. The first release was AutoCAD R25. The first release for mobile was AutoCAD Mobile App for iOS in 2017. Tested in marketplaces AutoCAD is marketed in various different ways. Originally, AutoCAD could be either the CAD software product (AutoCAD) or the graphics software product (AutoCAD R14). Later versions of AutoCAD allowed for both products to be licensed separately, meaning that a company could have one CAD version and one graphics version, or they could license both products together

Architecture AutoCAD Architecture is a sub-set of AutoCAD supporting architectural features and standards such as Architecture Visual Styles and Architecture Modeling. It is the most comprehensive sub-set of AutoCAD and is aimed at architects, engineers, and interior designers. AutoCAD Architecture was announced on June 14, 2002, and the first official release of AutoCAD Architecture was AutoCAD 2004. At the time, it was not yet possible to save a drawing in the native format of AutoCAD Architecture, so it was necessary to save it as a native format instead. This was solved in AutoCAD 2005 with the

introduction of the "Architecture" command. Architecture Visual Styles The Architecture Visual Styles sub-set of AutoCAD was announced on March 21, 2005, and the first official release of AutoCAD Architecture Visual Styles was AutoCAD 2005. It is designed to work with AutoCAD Architecture. This means it is focused on object style creation, and supports an AutoCAD-style ribbon, functionality, and icon set, as well as several Visual Styles such as Design, Presentation, Details and Search. AutoCAD Architecture Visual Styles was the first AutoCAD visual style to include drawing region color, which allowed the user to distinguish between the elements in a drawing region, as well as the ability to color by layer and layer count. This design allowed the user to choose between "per-object colors" and "color by layer". The user could switch between the two modes by clicking the "Object Styles" tab in the ribbon, which allows the user to change the object colors of a drawing region. In AutoCAD Architecture Visual Styles 2005, the user can create a custom interface by setting up one or more templates (generally styles) and then applying them to any object in a drawing. These templates are similar to macros, in that they can be saved and re-used. AutoCAD Architecture Visual Styles was the first to include the option to lay out objects automatically. It can automatically arrange objects into rows and columns. AutoCAD Architecture Visual Styles has two default styles: Object and Detail. There are six other styles (Design, Presentation, Quick, Search, Information and Style), which work with the default styles. The default styles of each are presented in the command line when running the command to create a new style. Architecture Modeling AutoCAD Architecture was announced on January 25, a1d647c40b
