AutoCAD Free [Latest]

A signature feature of the AutoCAD product family is its use of parametric modeling, for example, allowing a user to create a 3D model of a car using mathematical equations rather than by physically constructing a model. AutoCAD is also capable of generating 2D drawings directly from 3D models, and of generating 3D surface models. The product is available as a desktop application for use on a personal computer, or as a web browser-based product and for mobile devices. Autodesk AutoCAD is part of the Autodesk Suite of applications. The Autodesk Suite, which includes AutoCAD, Inventor, Navisworks, 3ds Max, and the digital manufacturing software (DMM) Make (formerly 3ds Max) (formerly Autodesk's 3ds Max software, the 3D modeling, animation, and rendering software), was first released in November 2012. The Autodesk Suite is currently (June 2015) available in 40 languages, with the full suite (including Autodesk AutoCAD 2017) available in 37 languages. Since 2014, Autodesk has offered a new subscription-based AutoCAD subscription service called AutoCAD LT to "speed up adoption and lower the barriers to entry for new users," according to an Autodesk statement. The subscription has a user level of 1 and user time can be purchased in 15-minute increments. The subscription can be purchased annually or monthly. AutoCAD LT consists of the AutoCAD 2017 version, and is optimized for the Intel® Core™ i5 processor, allowing new users to benefit from the increased performance of the latest model without the purchase of a new computer. History AutoCAD was first introduced in December 1982 and released commercially in March 1983. The AutoCAD product line was originally for use on personal computers. In 1987, Autodesk introduced AutoCAD LT for DOS, an expansion pack for Microsoft DOS systems, which later included the AutoCAD 2017 release in 1989. AutoCAD LT was expanded to the Windows platform in 1994. In 2005, Autodesk introduced the company's flagship AutoCAD product, AutoCAD LT, as a web-browser-based application, which allows users to work with AutoCAD drawings from any device, including mobile phones, and from anywhere, without having to connect to a computer. AutoCAD LT is also available as a mobile app for iOS and Android operating systems

Revenue officials have revealed how the system was hacked. The central government on Friday revealed how it was hacked, hours after The Wire had accessed the servers through which it transmitted information of around 28 lakh individuals, including Aadhaar numbers. The revenue department maintained that it was not hacked and it was by mistake. The Central Board of Direct Taxes (CBDT), however, did not provide any information on how a leak happened. It only said that the department has put in place security measures. According to the details accessed by The Wire, the number of Aadhaar holders who have either updated their Aadhaar or linked their PAN with Aadhaar number are much more than the total Aadhaar numbers available with the Income Tax department. For example, the Aadhaar holders whose Aadhaar numbers have been recently updated are 10.39 lakh more than the total Aadhaar numbers of the entire country. And of these, as of the date of data accessed, Aadhaar holders have linked their PAN with Aadhaar in an even higher number of 1.47 lakh. The leak does not include the number of Aadhaar holders who have not yet linked their PAN with Aadhaar. As of March 31, 2017, the Central Board of Direct Taxes (CBDT) had available 1,020
