Workflow Connectors: Leverage shared network drives for automatic source files or source paths. Workflow connectors send a single file directly to a single destination, while workflows map multiple files to multiple destinations at the same time. **File Switcher:** Keep an on-screen display of your source files at any time, while navigating through shared network drives, workflows, or data connections. **Automatic Kerning:** Treat letters, numbers, and symbols to be kerned as groups, and automatically kern them. **Color Scale Guides:** Pin to color scales and work on the same color in multiple drawings simultaneously. **Text Effects:** Add special text effects (such as drop shadow, glow, and shading) to your text. **Edit Geometry Through Transparency:** Increase the performance of your drawings by cutting and pasting without opening your objects. Simply edit the object's properties through the transparent shape. **Engineering Markup:** Symmetric boxes for fast, accurate dimensioning. Engineering markings automatically break symmetry and optimize your drawings for engineering precision. **CAD Scaling:** Quickly scale the actual size of your drawings to fit the whole monitor. Your drawings will appear the same on any screen size and zoom. **Replace Intersecting Shapes:** Draw a simple line that joins two intersecting shapes in just two clicks. **No more drawing multiple lines.** **New Commands:** Highlight a part of a drawing. It is now possible to highlight and create object selection by either mouse click, keyboard shortcut, or a simple text command. Quickly open tool palettes with the spacebar. **Save/Save As Feature Improvements:** Save your drawings on the cloud through a single click in the graphics window, and then open it from any device. **Quick Open Tool Palettes** with the Spacebar **Save Files to Cloud:** With the new cloud feature you can open and save files from anywhere with a single click.
