Programmers can extend AutoCAD functionality using the Visual LISP language, and program their own automation macros. This enables the creation of dynamic and customizable applications and macros, without coding or third-party components. There are also third-party development tools available that enable programmers to extend AutoCAD's functionality. A common way of extending AutoCAD functionality is to create and distribute macros. For example, AutoCAD allows a user to design building infrastructure such as staircases, elevators, machinery, and equipment. There are also some default extensions available. For example, the PATH attribute of the COLLAPSED command can be used to control the visibility of a view or component. Visual LISP and AutoCAD Visual LISP is a general-purpose programming language designed to support an integrated development environment (IDE) and is widely used in AutoCAD. It is based on LISP, a high-level language for implementing a functional programming paradigm, but was not originally designed for CAD programming. Visual LISP supports the execution of AutoLISP functions, so that programmers can control AutoCAD through their own functions. AutoLISP includes native support for modules, functions and procedures and also supports extension with Visual LISP. AutoLISP is a programming language designed to work with AutoCAD. It is programmed with the Visual LISP IDE. Visual LISP has been adopted to extend AutoCAD's functionality. Microsoft Visual LISP, Visual LISP for C++, and Visual LISP for AutoCAD are available on the

AutoCAD Application Store for AutoCAD 2013 or later. Visual LISP and AutoCAD have also been used to create custom add-on products. For example, H&L Engineering Tools is a visual LISP software for architectural drawings, which allows the authoring of custom LISP code. This is different from third-party development tools, which enable the authoring of AutoCAD macros. Other examples of custom development include: DDVJ (Drawing Development with VBA) is a VBA-based drawing development software from Sirona Dental Systems (now Dentsply Sirona). It was developed by Dr. Markus Pelczynski. EXEON (ExeOn) is a set of VBA programming tools developed by EXEON AB. F a1d647c40b
