Computer-aided drafting and design software History AutoCAD was initially developed by Gary Kildall, founding principal of the company which would later go on to release the CP/M operating system. Autodesk bought Kildall's Computer Associates division in 1987, and integrated the CAD software into its own product line. At the time of its purchase, Computer Associates had more than 650 employees and a market value of \$235 million, and the AutoCAD product was the second-largest selling suite in the market (after Microsoft's VisiCalc), with an estimated US\$3 million in annual sales. Autodesk chose to continue supporting CP/M, thereby ensuring that users still had access to the functionality that the purchased product offered. In 1990,

Autodesk launched a complete rewrite of AutoCAD as a 32-bit DOS application (AutoCAD Architecture) with substantial changes to the user interface and programming model. In addition to starting from scratch, the developer team made further changes to the program's codebase in 1992, and renamed the product AutoCAD 1992. This version was fully 64-bit, and required the use of a 3dfx Voodoo Graphics board, which ran a proprietary operating system, allowing it to render to the screen at the native 16.6 million colors instead of the standard 16-bit color palette. AutoCAD 1992 was also the first version of AutoCAD to be distributed as shareware. More changes were made to AutoCAD 1992 in 1994, when it became the first AutoCAD version to use a programming interface called the DWG and DXF file format. The.dwg file format is widely used

today. This DWG file format is used for a wide variety of documentation files in the industry. The DXF file format is widely used for files with design and engineering purposes. In 1998, AutoCAD 2000 was released as an upgrade for AutoCAD 1992 users and as a new version for non-users. In 2000, Autodesk acquired Alias Technology Corporation, developer of the DWG and DXF file formats. Autodesk has since worked on the DWG and DXF file formats through a number of different licensing and technical approaches. In 2007, Autodesk's then-CEO, Frank Artzt, stated that the company plans to include the DWG and DXF file formats as part of Autodesk's existing \$1.3 billion CAD portfolio,

Scripting language AutoLISP is a computer programming language for AutoCAD that enables high-level scripting. LISP is written in the AutoLISP interpreter. The scripts can be set to be run automatically, or can be set to execute under various circumstances, such as every time the drawing is opened or whenever a specified shape is selected. The scripting language can also be used to create macros. .NET is another programming language for AutoCAD that enables software developers to access the full power of AutoCAD from a Microsoft Windows environment.

AutoCAD.NET users can use AutoCAD objects as well as Microsoft.NET and Visual Studio.NET components. It is a thin client version of AutoCAD. VBA is a Microsoft Visual Basic for Applications programming language for the Microsoft Windows operating system and the Microsoft Office Suite. The

VBA programming language can also be used to create macros. Visual LISP is a structured programming environment for AutoCAD that supports the creation of macros, filters, utilities, extensions, and system modules.

Keyboard shortcuts Some common keyboard shortcuts in AutoCAD are:

- Ctrl + 1 (\leftarrow) – Moves the current point one unit to the right.
- Ctrl + 2 (\rightarrow) – Moves the current point one unit to the left.
- Ctrl + 7 (\downarrow) – Moves the current point one unit up.
- Ctrl + 8 (\uparrow) – Moves the current point one unit down.
- Ctrl + D (\rightarrow) – Moves the current point in a direction.
- Ctrl + 0 (\leftarrow) – Moves the current point 180 degrees left.
- Ctrl + F (\downarrow) – Moves the current point 180 degrees up.
- Ctrl + N (\uparrow) – Moves the current point 180 degrees down.

Tools There are many tools in AutoCAD that are useful for any type of design. Some of the most commonly used tools are:

- Rulers – The ability to create,

modify and remove rulers Dimension – The ability to create and modify dimension lines
Feature Control – The ability to create and modify features such as Revise Properties, cut, copy, delete and snap Layers – The ability to create, modify, hide and display layers Sheets – The ability to create, move, modify and hide sheets Linear and polar coordinate systems CAD Text and dimensions (internal AutoCAD term) Datum and origin Solid and surface linetypes a1d647c40b

To use Autocad, you need to first activate it. Once you have completed registration, you can activate it. Go to the Setting>License tab> Activate license. **IMPORTANT:** If you are using mac, you have to activate the license before you can use it, the license activation time is 24 hours. By Bill Keogh

NORRISTOWN, Pa. (Reuters) - Three jurors who acquitted a policeman in the shooting death of a drunken driver in a high-profile Pennsylvania case on Friday will remain anonymous, with one of them saying his name would identify him in the media. The jurors told reporters in an impromptu news conference that they felt justified in disregarding the police testimony of the officer, Officer Jermaine Frierson, because of

contradictions in his testimony and evidence suggesting he did not point his weapon at David Seals until after he was mortally wounded. “We had jurors who felt Officer Frierson’s testimony was not credible,” Judge M. Teresa Sarmina said. “Officer Frierson was the only witness to the shooting,” Sarmina said. “We have three non-cooperating jurors who believe the officer’s testimony was not credible. “They were not trained officers, and they were in a better position to make credibility determinations,” Sarmina said.

Frierson, the city police officer who shot 31-year-old Seals four times in the head after a drunken car chase in 2010, testified that he shot Seals because he feared for his life. In a victory for Frierson, jurors acquitted him of involuntary manslaughter and three counts of reckless endangerment in the death of Seals, who was pulled over for erratic driving in

Bucks County. The verdict came during the second week of the trial, which heard from Frierson and several eyewitnesses to the incident. On the first day of deliberations, two jurors told media that they thought Frierson's story was plausible, and that they would not have found him guilty if they believed he had committed a crime. Another juror told reporters that the jury spent the first two days "piling up evidence that wasn't there" to convict the defendant. "The evidence is overwhelming in this case," said the juror, who identified herself only as ♦
