The development process for AutoCAD began in the late 1960s, when Oliver Shreiner was the director of research and development for his company, Systems Development Corporation (SDC). He saw CAD as the next wave in the development of computer graphics, and he developed the concept of an "autosketch," a concept in which a user could enter a drawing and have it created on a computer terminal. The first autosketch was released as a part of AutoCAD in 1976, and the first commercial release was in 1978. The first commercial release was followed by further upgrades throughout the 1980s and early 1990s. The second generation of AutoCAD was released in 1983, which featured the first automatic linety

ObjectARX is a non-Microsoft extension to AutoCAD. ObjectARX is an object-oriented programming language. It was created in the late 1980s by James Clark and Mark Wren as an extension to AutoCAD. ObjectARX enabled drawing and database developers to create custom programs for AutoCAD, saving time and money on the design cycle. A number of applications were developed and released in the early 1990s. One of these is Architectural Design Software, an extension to AutoCAD for architects and building designers. Several such products exist, such as Architectural Design Software from Autodesk and ARChitecture from Dynamic Converter. Some of these products are based on ObjectARX, although they offer other useful extensions. The ability of p-X-Rib, p-C-Rib, and p-C-L-Fuc to inhibit formation of the somatic attachment points of the type A sea urchin sperm. Three p-aminoarabinose derivatives of the somatic attachment points of the type A sea urchin sperm, p-X-Rib, p-C-Rib, and p-C-L-Fuc, were synthesized and tested for their ability to inhibit attachment site formation in vitro. The derivative p-C-L-Fuc was found to be ineffective. The derivative p-C-Rib was found to be approximately 25-fold more potent than p-X-Rib in inhibiting attachment site formation. These results support the conclusion that the carboxyl group on the C-terminal end of the protein backbone is responsible for the action of the X-
