## **Fullscreen Anything For Chrome Crack X64 (Final 2022)**

**Download**

Turn any video or image to fullscreen

Fullscreen Anything – a browser extension with a peculiar philosophy. It turns any video or image to fullscreen while you browse the web. Also, the extension does not only make online streaming videos appear huge, but it also removes all the advertisement along the way, even those from the page you're currently browsing. It is perfectly natural that all web browsers can't be developed to the same standard. This is why Google Chrome comes with different features that are unique and distinct. The same is valid for Fullscreen Anything, a browser extension that enables you to increase the size of any image, video, or

online game you are watching or sharing. Chrome's market share is so high that a minor addition like Fullscreen Anything can go unnoticed. However, this is not the case for its users as it is easy to see that a cool feature like this can be quite useful. You'll most probably use Fullscreen Anything to increase the size of the video you're watching or to browse and maximize some of your favorite images. You'll be amazed to know that Fullscreen Anything is available for all popular desktop and mobile browsers including Firefox, Opera and Safari. What's more, you don't need to install anything to use this Chrome extension. It is enough to activate the extension through the Chrome store and then turn any online image, video, or online game into fullscreen. The result will be a very spacious web page or video that allows you to

---

view images in their actual size. As you can see in the video below, Fullscreen Anything makes a large online image appear huge, resulting in a more practical navigation. However, if you want to maximize an online image that has already been resized, it is only a matter of clicking once. In our tests, the extension worked with all the pages we tried it on. To turn any online image, video or online game into fullscreen, simply click the proper button that appears in the toolbar or use the shortcut 'Ctrl+Space'. At this point, Fullscreen Anything not only resizes the online image, but also turns all the advertisements and the overlay that display ads on every web page into white layers. You can choose to continue browsing without having to face annoying adds and to keep your favorite images intact. Besides, the extension keeps
