Some of the best action games in the world are based on the Unreal Engine, and those who know the software well know that it is extremely expensive. Epic Games, the company behind the Unreal Engine, has long been a sponsor of CG conferences, like last year's SIGGRAPH where Unreal was on full display. The Power of Unreal Engine The Unreal Engine isn't just a game engine; it's also a level editor for creating game levels, or levelsets, and it supports several formats for storing those levels, including binary files. The Unreal Engine allows level designers to explore all sorts of gameplay possibilities, including vertical gameplay, where the camera doesn't move up and down, or even side to side. Since the game world is always visible, level designers can think about the game space in much different ways than they might be able to in a purely top-down or isometric environment. But even with a game engine, level design can be a huge undertaking, and creating a level in Unreal takes a lot of time. That's where modding comes in. Using the Unreal Development Kit (UDK) and tools from the program's partner Modo, level designers can create their own levels that work with Unreal. So if you've been itching to make your own game, and don't want to spend the money on an Unreal Engine license, you can use the UDK to do it instead. The modding community has always been very active, and as the tools continue to improve, so do the creations. Audacity The Unreal Engine is now open source, which means that everyone can see what's happening behind the scenes. Since the Unreal Engine is used in so many big-budget games, you can often find on-line video tutorials, complete with step-by-step instructions for importing, mapping, and even creating complex gameplay systems. But there's also a wide array of freely available software that can help the level designer create a level. The best-known free software for creating levels is Audacity, an excellent audio editor, which is even better for creating levels. With the level editor, audio clips and other audio files are imported into a level editor as audiosources, and with the right 4bc0debe42
