ProBasic is a powerful application created for the designers that need to create 3D ship models. The program can handle only chine hull boats (no round bilge hulls) and has all the features required to create and edit them. The program is customized for the creation of simple hull designs and includes the hydrostatics, stability or resistance calculations. The program has a unique feature that allows you to model the boat hull from any dimension (X, Y, Z, diameter, dia...). You just select a point where you want to start modeling and then you place the 3D path to the point in the boat hull. For example, we can start modeling a boat with a type of chine hull, with one semi-circle and two circular sections. Features of ProBasic: The ability to create 3D shapes (polygons), beams, stringers, planks, stringers, strakes, details, rudders, fenders, risers, etc... Ability to export 3D models in the following format: OBJ Embedded textures 3DIMension DXF Ability to import 3D models in the following format: OBJ, DXF Embedded textures 3DIMension Ability to have ships as a dynamic object in the scene (rigid bodies) Ability to save polygon meshes as single- or multi-colored textures Ability to create and apply a translucent material (glossiness effect) with the use of specularity Ability to paint ships with a material based on a texture Ability to include materials in the ship model and change their color in the scene Ability to include external models (planets, oceans, etc.) in the scene Ability to select and create isometric textures for rigidity Ability to save and load the scene (as a .PBS file) to a memory card Ability to save models in a different scene (Open CreaScene) Ability to export models in different formats How to Install ProBasic on your Windows: 1. Download ProBasic for Windows 2. Extract the zip archive and install the application 3. You can also install it into the folder where the game is installed 4. You can later access ProBasic via the game icon in the taskbar or through the Start Menu. 5. After installing the application, you need to click on the "new project" button. 6a5afdab4c

The aim of the study was to assess the effect of alpha-lipoic acid on metformin-induced changes in lipid peroxidation and the activity of antioxidant system in rats. The study was carried out on male Wistar rats, aged 8 months and weighing 400-450 g. The animals were divided into five groups. Group 1 included non-diabetic rats, group 2--diabetic rats, receiving metformin (m.w. 495.4) (0.14 mg/100 g b.w.) ip once a day, for 14 days, group 3--diabetic rats, receiving metformin and alpha-lipoic acid (m.w. 576.8) (0.05 mg/100 g b.w.) by gastric intubation, once a day, for 14 days, group 4--diabetic rats, receiving metformin and pioglitazone (m.w. 730.5) (5 mg/100 g b.w.) by gastric intubation, once a day, for 14 days. ProBasic's documentation includes: ProBasic manual Sample models ProBasic Tutorial Cannot load the documentation... A: You have to run it as Administrator As follows: Click the start button Type command prompt into the start menu search bar. Right click the command prompt and select Run as administrator. [Note: this is the same as in windows vista - the "Run as administrator" option in the right click context menu.] A: I had the same problem, as I've been using it for weeks, and suddenly it would not load the help file, though it was trying it a few minutes before. The problem was that the file was not located in the "My Documents" folder, but in the Program's "Data" folder. Note that if you run it from there, you still must have admin permissions. A: I had the same issue. Here's what solved it for me: Make sure you run it as admin Make sure there are no desktop icons for the program Once I did that, everything worked fine. 1. Field of the Invention The present invention relates to a radio network controller, a radio access network and a method of assigning the address of a mobile station or of a base station to a mobile station. 2. Related Background Art A mobile station is any device which is carried by a user and which is used for wireless communication. As for example radio links are used between the network and the mobile station, the network is typically a base station. In order to be able to exchange data or messages between the radio access network and the mobile station, the mobile station must be assigned an address which will be used for communication. This address is typically a certain address of the radio access network or of one of the functions of this radio access network and is referred to as a network address of the radio access network or as a network address of the function in question. There are various known techniques for the assignment of addresses to mobile stations. For example
