Archives Office/Admin Skills Skills
Showcase Alan S Cook looks back at a
career in this article. The programming I
had been doing for the central office had
gone well for the most part. It was time for

a change and there was an opening with a nice company.. /Busses/ Archives /Maintenance/ . I wanted to raise awareness and get the word out to all my contacts, it did not take long to get an offer of employment. A: Use a virtual private network (VPN) to connect to your network via a system located within your home. You can setup your device with virtual routers and a VPN at your router. Once setup you'll be able to take your laptop anywhere. As stated, you'll need a computer to connect to the system at home. A: Greatest.

Unfortunately I don't know of any public terminal servers that are free, but I might be wrong. Q: How can i start 2 threads at the same time I want to start 2 threads in the same time. Can it be done or not? Thread t1 = new Thread(new Runnable() { public void

`run() { //do some work } }); Thread t2 = new Thread(new Runnable() { public void run() { //do some work } });` A: Can it be done? Yes, it can. But you don't really need to create separate threads to be able to accomplish what you want to do. You may look at the Executor framework and the `Executors.newCachedThreadPool()` A: Using Threads would be a bad idea. You are better off using an Executor or `CompletionService` or some other concurrency pattern which is much more suited to this kind of thing. EDIT: There is no problem starting two threads at the same time. They just cannot both do anything useful at the same time. EDIT2: You can create a simple Exec 570a42141b
