

How to Active OrCAD 9.2 Full Version?

A: The.rar file extension is standard RAR archiving format and not in any way related to OrCAD or any other software, although there might be a company registered under the OrCAD name that could have created it. RAR is merely a file archive format, a ZIP archive. It is not specifically related to Orcad at all. RAR format itself is not designed to contain any Orcad specific data. Q: SQLAlchemy is not working on Python I'm currently having a hell of a time trying to find why my SQLAlchemy query isn't working. I've got the code below from my Django project but I cannot even get it to print the total number of rows in the table. I thought it might be something to do with the duplicate table name but moving it into quotes seems to make no difference. My python code is: def all_lives(request): print "live total" db = get_db() print "total lives" tbl = db.execute("SELECT count(live.*) FROM live") print tbl My models.py is: class live(models.Model): Name = models.CharField(max_length=40) Natty = models.CharField(max_length=40) Wonder = models.CharField(max_length=40) Animal = models.CharField(max_length=40) Pet_Bits = models.CharField(max_length=40) Pet_food = models.CharField(max_length=40) Pet_drink = models.CharField(max_length=40) Paws = models.CharField(max_length=40) Sleep = models.CharField(max_length=40) Exercise = models.CharField(max_length=40) Fun = models.CharField(max_length=40) Life = models.CharField(max_length=40) Birth_Date = models.DateField() Death_Date = models.DateField() Picture
