#### What's New in the RDP Admin Book?

RDP Admin Book is a handy utility that allows users to enter and manage a list of servers. It has the capability of handling many servers and locations simultaneously. It supports both offline/online setups and no account required/account required. Pros - Windows XP or newer - A comprehensive admin book for Windows Servers with over 200 options that let you tweak it to your liking - Works on both offline and online setups with no account required - Allows for easy creation and management of a list of servers Cons - Server list does not provide a means of storing credentials - Doesn't work on servers located behind a proxy Use of this RDP Admin Book review will help you in: - Making a list of your servers and their details - Uploading and adding new servers - Configuring the RDP Server List details - Creating, editing and managing a list of servers - Saving credentials of your servers The product's interface makes use of a sidebar, which shows you the list of all the servers that you have and the tabs and options available. Once in the sidebar, you can easily click on the Servers tab, which will show you all the details of the different servers that you have. The newly added servers will appear in the right side of the sidebar, and the details of each server can be seen by clicking on its name. From there, you can easily configure and edit each of the details associated with the server. As an example, the general settings of a server can be configured by clicking on the right side of the Servers tab, and the individual details of a server can be configured by clicking on the name of the server in the sidebar. Once a server name is clicked, the box will pop up, with all the details that can be configured available. The search box in the sidebar is used to look for any individual server. The details that can be seen in the box depend on the type of server that is searched for, and the details of a newly added server will be immediately visible once they are added in the list. Once the search box is filled, any server with the associated details will be instantly shown in the right sidebar of the application. One of the important features of this application is that it works on both offline and online setups. There is no account required to use the application, and using the offline setup will let you add new servers and maintain them online, and it will provide you with access to your servers and locations from anywhere, as long as you have an internet connection. One can create their own list of servers, enter the details of the various servers and locations and add the servers to it. The application allows the user to upload the Server List to the online servers and create an account for it, which can be used in future as
