She ended up thinking of staying with them for most of her time at college. "It's the best thing that ever happened to me. I'm learning everyday about how to become a better person; I'm learning about myself and why I did what I did in the past and the things I've been struggling with." Anyone who knows this family knows that they are a very loving and generous family. "They are so loving and I've always wanted a good role model in my life; someone who's older than me, who's very successful, and who teaches me why they're successful and why you need to be successful in your life." As a result, this family takes great pride in giving back and are very involved in the community. "Not only do they give back to the community, but they just take pride in being a good citizen. "They've served the community for decades." It's a great family and we hope that they are always able to find love when they need it.1. Field of the Invention The present invention relates to a filter circuit and a high-frequency switch circuit, which are configured for use in, for example, a high-frequency signal processing system. 2. Description of the Related Art In high-frequency signal processing systems, such as wireless systems used in, for example, wireless LAN, Bluetooth, etc., attenuation of high-frequency power is required so as to ensure that circuits and the like connected to a high-frequency path do not saturate. In addition, it is also necessary to reduce interference by other signals in the same high-frequency path, in order to
