The male menopause If you are a male, do not worry, you will not be to suffer as much as the females, that is, you won't experience the following: – Hypogonadism – Impotence – Nocturia – Erectile dysfunction – Osteoporosis And most important: sexual dysfunction. What is the male menopause? According to the Mayo Clinic, the “male menopause” is a common term used to describe the problems that can affect the testosterone levels of the adult male, which is a condition observed in the post-menopause period. In this stage, the male's testosterone level begins to diminish to the point where his health begins to be affected. Most of these symptoms are associated with age. In spite of this, some men who experience sexual problems could also have other causes. For example, those who have alcohol or drug use problems, cardiovascular problems or who are obese can also suffer from these problems. It is important to be aware of these things, since it can often be complicated to diagnose the
