Crack 2020 Free Download.Q: Facebook API v2.8 - "is_secure" is not a valid query for the fields "Pagetoken" I have in my application the following query on login, which returns the user in JSON format, but when requesting this with the is_secure check, I keep on getting this error: This API call requires the 'is_secure' field to be passed with a request containing a valid Pagetoken. when using the following: Is_secure=1 What does this mean? A: There is only one way to obtain a user's pagetoken (which tells Facebook when you access the user's data, to allow the access token to be cached for a period of time). You must send a HTTP POST request to Notice that you cannot send a GET request, which would normally query an arbitrary user's "published_posts". Your user will be able to see the "published_posts" but not the requester of their "published_posts" The same limitation exists for friends feeds. In this case, though, you must use an HTTP POST request to a URL such as 570a42141b
