Tanti CPU Meter is a free widget that allows users to see at a glance the current CPU and RAM usage on their computer. The app is quite small, and it comes in handy to those who would like to easily keep tabs on the system resources to which they are dedicated. It also serves as a good replacement for the more overbloated modern CPU and RAM gauges. Since Tanti CPU Meter doesn't feature any options of its own, users will have to rely on the Windows settings to make any basic changes, such as increasing the frame size, moving it to the top most window, and so on. However, the app has a good refresh rate, and it displays detailed information about the system usage. No error dialogs have been shown in our tests, and the app did not hang or crash.
