AutoCAD was named after the movement's leader, Dr. Martin Luther King Jr. (Martin Luther King, Jr. was also the leader of the Southern Christian Leadership Conference). King's civil rights activities during the 1950s and 1960s, such as the Montgomery Bus Boycott and the Selma-to-Montgomery March, sparked the creation of AutoCAD, according to the company's website. AutoCAD is designed for drafting and design, but it

also includes features for parametric modeling, computer-aided manufacturing (CAM), and drawing of technical designs. AutoCAD's history can be traced back to the early 1960s. At the time, as automation was becoming more and more of a reality, companies wanted to use automated machinery to perform functions once performed by manual workers. One such function was the drafting of blueprints, diagrams, and drawings. However, standard CAD programs that were used in those days were

fairly primitive. There were several reasons for this. One was the time it took to create a CAD program for a specific application, and the other was that computer graphics were simply not as powerful as they are today. The first step in AutoCAD was the creation of the AutoCAD LT.

Developed in the early 1980s, the AutoCAD LT was a simplified version of the more advanced AutoCAD, designed to reduce the time needed to create a design, not necessarily to reduce the capabilities of the program.

AutoCAD's first retail product was the AutoCAD LT, which was introduced in December 1982. The AutoCAD LT was designed to run on any Apple II series or compatible computers, including the Apple IIc series, Apple IIe series, and Apple IIGS series. These computers ran a BASIC interpreter that provided high-level language programming capabilities. In addition, the Apple IIc and IIe series were the first computers with a Graphics Toolkit (GTOK) and provided access to a graphics device

driver that allowed for high-level graphics programming. Because of these features, the Apple II computers were able to perform some of the functions of CAD programs at the time, including the ability to draw graphical objects and place them on the screen. These Apple computers also supported the generation of 2-D bitmapped graphics in a format known as TIFF. In 1985, the AutoCAD program was released for Macintosh personal computers

Legacy AutoCAD releases in the early 1990s had commercial limitations and restrictions. Beginning with AutoCAD 2007, release of new features, including AutoLISP, and all major new releases of AutoCAD were released on an open-source basis with limited commercial licensing restrictions, except for new functionality, which is generally priced at the standard price for that feature (i.e., not priced below that for the

feature itself). This has allowed the development of several open source projects that have enhanced the base product, including both commercial and free (as in software) open source software (FOSS). New York City became the first major city to warn against the coronavirus on Monday, saying it is now a “public health emergency” and urging residents to stay indoors and to shelter in place, according to a statement from Mayor Bill de Blasio. The mayor said he made the decision in conjunction with the city’s Health Department, the city’s fire commissioner, the city’s schools chancellor and the city’s public

health commissioner, Dr. Oxiris Barbot. New York’s decision comes as more U.S. cities, including New Orleans, Los Angeles and San Francisco, have adopted similar declarations. “The spread of coronavirus will pose a significant threat to the health and safety of New Yorkers — not just in the short term, but for many months to come,” de Blasio said in a statement. “In order to slow the spread of the virus and keep New Yorkers safe, we need everyone to follow the guidelines and directives

to stay at home.” Read more at

in an array I am currently learning and using the Arduino. I am working on a simple display. I want to make sure I am using the right way to input the value into my array so it can be displayed to the screen in the right format. I am using Serial.println to print the contents of the array, I want to print the value and the 0 before.
