What's New in the?

PDF to Image Converter is a software tool that allows the conversion of PDF files to standard image formats such as JPG, PNG, GIF, TIFF, BMP, PSD. It is compatible with both Mac and Windows platforms. The conversion process runs in the background without interrupting the user's workflow and without any noticeable delay. Once finished, PDF to Image Converter displays a list of converted files and alerts the user if there are files that could not be converted. The program is set up to work with standard interfaces, requiring no prior knowledge from the user. It does not support batch conversion, but all in-process PDF pages are handled separately. PDF to Image Converter can handle PDF files in both compressed and uncompressed formats. Supported options include a number of predefined dimensions for the final image, a maximum file size, a cropping option and an automatic image resolution. Users are also given an option to adjust the output image quality and color profile. PDF to Image Converter provides adequate settings for output image format (JPG, PNG, GIF, TIFF, BMP, PSD, TGA). Conversion settings include a number of options such as maximum image size, encoding method (lossy or lossless), image quality, image compression and file type (png, jpg, tiff, jpeg, gif). The software provides two options for cropping images; a free hand selection and a rectangular selection. Conversion process is automatic, taking place in the background without any visible delay. Once the process is finished, the program displays a list of converted files and alerts the user if there are files that could not be converted. Some files could not be converted because they are too large, or contain print bleed. PDF to Image Converter has not been tested with text containing certain special characters.
