Align/Alignment is used for the alignment of text or elements in the layer. The text is rotated horizontally or vertically to fit within the image space. The text is cropped to fit into the selected area. The text is rotated and the angles of rotation are recorded. The selected text is copied as a new object. See also: Align/Alignment
Align/Alignment was moved to the Layers panel in Photoshop CS5. A Amp/Amplify. The Amplify command enables you to adjust the brightness or contrast of the selected pixels. See also: Amp/Amplify A Applying/Applying. See also: Applying/Applying Are you looking for the 'Apply' option? The 'Apply' option was removed from the Edit > Apply menu in CS4. Instead, users must now use the New Photo > Apply Layers command. The 'Apply' option is still accessible through the New Photo > Applying Options dialog box. B B Band/Bandwidth/Bands. See also: Band A Brush. The Brush tool is used for a paint like effect, to make selections, or to apply specific styles or effects. The tool can be used to create any type of brush including solid, gradients or symbol brushes. The current size and the sizes of the brushes within the Brush Options dialog box can be changed. See also: Brush B Bucket Fill. In Photoshop Elements, the Bucket Fill tool fills selections or objects in the layer by using a single color, or gradient that automatically changes across the selection or object. After a selection is made, the Bucket Fill tool will select the pixels at the center of the selection. The tool has three bucket fill options 05a79cecff

We haven't seen too many people using their gaming pc for photoshop work. Most make do with a laptop. It's not that hard to use a laptop for photo editing. There are many good programs and all are free. I haven't tried it myself, but I understand one of the benefits is the ability to use Adobe Photography Suite on a laptop without having to drag heavy photo editing programs around with you to even more places (I'm looking at you Lightroom). There are many other benefits as well - for instance, Lightroom on a laptop can allow for a much more efficient workflow. For example, you can more easily roll back a batch of edits if one of them didn't turn out the way you had hoped, you can export multiple images with different formats and settings all at once, etc. Obviously, programs like Photoshop and Adobe Photography Suite have their own advantages/benefits as well, but those are ones that can apply to any of the app stores that Apple has in its ecosystem, and people have experienced and talked about using their PC as a workhorse for photo editing work (in other areas of work as well, of course). I am just curious how people make workflow with a laptop for photo editing. It's still hard to imagine that something like Adobe Photoshop or Lightroom could be running on a machine that is small enough to slip into
