To investigate the correlation between Epithelial-Mesenchymal Transition (EMT) and epithelial cell proliferation, differentiation, and apoptosis in laryngeal cancer. The expression of epithelial and mesenchymal cell markers, and epithelial cell proliferation, differentiation, and apoptosis were observed in normal tissues and laryngeal cancer tissues using immunohistochemical staining and western blot. The expression of E-cadherin in normal tissues and laryngeal cancer tissues was 100.0% (10/10) and 20.0% (2/10) (P=0.000), the expression of vimentin in normal tissues and laryngeal cancer tissues was 0.0% (0/10) and 100.0% (10/10) (P=0.000), and the expression of Ki-67 in normal tissues and laryngeal cancer tissues was 0.0% (0/10) and 100.0% (10/10) (P=0.000), respectively.
