Architecture AutoCAD  
Architecture is a sub-set of  
AutoCAD supporting  
architectural features and  
standards such as  
Architecture Visual Styles  
and Architecture Modeling. It  
is the most comprehensive  
sub-set of AutoCAD and is  
aimed at architects,  
engineers, and interior  
designers. AutoCAD  
Architecture was announced  
on June 14, 2002, and the  
first official release of

---

AutoCAD Architecture was AutoCAD 2004. At the time, it was not yet possible to save a drawing in the native format of AutoCAD Architecture, so it was necessary to save it as a native format instead. This was solved in AutoCAD 2005 with the introduction of the "Architecture" command. Architecture Visual Styles

The Architecture Visual Styles sub-set of AutoCAD was announced on March 21,

---

2005, and the first official release of AutoCAD Architecture Visual Styles was AutoCAD 2005. It is designed to work with AutoCAD Architecture. This means it is focused on object style creation, and supports an AutoCAD-style ribbon, functionality, and icon set, as well as several Visual Styles such as Design, Presentation, Details and Search. AutoCAD Architecture Visual Styles was the first AutoCAD visual

---

style to include drawing region color, which allowed the user to distinguish between the elements in a drawing region, as well as the ability to color by layer and layer count. This design allowed the user to choose between "per-object colors" and "color by layer". The user could switch between the two modes by clicking the "Object Styles" tab in the ribbon, which allows the user to change the object colors

---

of a drawing region. In AutoCAD Architecture Visual Styles 2005, the user can create a custom interface by setting up one or more templates (generally styles) and then applying them to any object in a drawing. These templates are similar to macros, in that they can be saved and re-used. AutoCAD Architecture Visual Styles was the first to include the option to lay out objects automatically. It can

---

automatically arrange objects into rows and columns. AutoCAD Architecture Visual Styles has two default styles: Object and Detail. There are six other styles (Design, Presentation, Quick, Search, Information and Style), which work with the default styles. The default styles of each are presented in the command line when running the command to create a new style. Architecture

Your comments on the  
drawing are incorporated

into your model as annotations, so you can review and correct them from inside the model. (video: 1:15 min.)

**Drawing Layout:** Creating a new drawing layout is easy. Move objects, delete objects, create views, use a style and more, all while previewing the layout. With the Quick Access toolbar, you can place, zoom, move, rotate, hide or show objects. (video: 2:50 min.)

**View**

Objects/Lines: Use the Quick Access toolbar to easily switch between different views of objects or lines. You can use the toolbars, drop-down menu, and 3D Cursor to quickly and easily select, move, delete, and rotate objects. 3D Cursor and Snap: Select a 3D line in your drawings with the Quick Access toolbars 3D Cursor or with the 3D Cursor, and then use the Snap command to move and rotate your line.

(video: 0:33 min.) Editing: Adjusting the current object, group, layer, or view does not always change the document. A few edits, however, update the drawing on the fly. To edit a file, you can select a specific part of the drawing, set it as the current object, and make changes to the current object. You can even add comments or annotations to the current object. The drawing is updated, and you

---

can view and edit the updated drawing at the same time. (video: 0:43 min.) Multi-Object Editing: The new Multi-Object Editing window provides a flexible way to add and edit multiple drawings or views. You can work with multiple images without switching between windows. Using the Multi-Object Editing window, you can:

- Merge multiple images to one new image
- Add or delete shapes
- Edit the path
