The advent of affordable desktop computers equipped with integrated graphics chips provided a powerful new platform for CAD in the 1980s, and a major player in the field of desktop computing, Autodesk, was founded in 1982 to exploit this opportunity. As a long-term partner of industry and the military, Autodesk has many decades of experience in CAD and drafting, and in particular in visual communication. The technology behind the company's core products, such as AutoCAD, is continually under development, and is used by millions of people every day around the world. In addition to CAD and drafting, Autodesk also offers a wide range of other software and services including a web-based interface for collaborating with others from anywhere around the globe. AutoCAD History Autodesk AutoCAD started as a product to deliver visualization of 3D computer-aided design (CAD) models within a 2D graphics tool. It was introduced to the public in 1982 as a desktop application running on personal computers equipped with integrated graphics controllers. The original AutoCAD was bundled with basic drafting tools and software. In 1987, Autodesk developed a version of AutoCAD for the Apple Macintosh in addition to its existing Windows version. Before Autodesk released AutoCAD, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal, which gave the programs a 1980s high-tech feel. AutoCAD Model AutoCAD 2018 enables you to design all three-dimensional (3D) objects as well as 2D drawings. A 2D drawing can serve as a template or a guide for 3D objects, and vice versa. The AutoCAD Architecture The Architecture product is a suite of tools that includes the Drawings and Modelling, Annotate, and Layout tools. The Architecture environment is based on a 3D model, which is displayed in an interactive window. In that 3D environment, the user can place objects, see their properties, modify their appearance, as well as work with them.

We present our experience with solitary pulmonary calcification (SPC), occurring in 8 cases aged 30 to 72 years (mean 55). The male/female ratio was 2:1. All had been studied because of a strong clinical suspicion of the disease. Chest radiographs and CT revealed the disease, showing multiple asymptomatic calcified nodules with a few millimeters in diameter. In five cases the calcified nodules were multiple, appearing in different locations and in three of them there were other findings of bone or mineral metabolism disorders. Two patients had renal failure. One case had a history of cholecystectomy, another case of cardiac surgery and one case of asbestosis. Three cases had an inflammatory bowel disease. In addition, asymptomatic calcified lesions were found in the other three cases: azygos vein, parietal pleura and mediastinum. The CT findings in all cases showed atelectasis, thickening of the interlobular septa and ground-glass density. The calcifications were nod
