Autodesk, a provider of computer-aided design (CAD) software, today announced AutoCAD 2017, the first major release of the company's AutoCAD software since its 2011 redesign. The new release brings AutoCAD into 2017 and offers enhancements that will help architects, engineers and designers improve the way they create their designs. "AutoCAD continues to be an important tool in every aspect of the design and construction industry, from development, to construction, to operations and maintenance," said Mark Veeder, vice president of AutoCAD business at Autodesk. "With AutoCAD 2017, we are providing a new look and feel for the best, most user-friendly version to date." The new AutoCAD improves on the design concept introduced in AutoCAD 2011. "We've heard from our customers that they wanted AutoCAD to more closely resemble AutoCAD 360, and that's what they are seeing in AutoCAD 2017," said Mike Talbot, director of AutoCAD product marketing. "We've also redesigned AutoCAD to make it easier to use, introducing AutoCAD 360 R1, a new version that is light on your computer resources and works well with mobile devices." AutoCAD 2017 is available now for the PC, Mac, Linux, and Android mobile platforms. With AutoCAD 2017, architects, engineers and designers can now create 2D and 3D drawings using the same interface across different types of work, such as creating a floor plan of an entire building from a single point. The new AutoCAD 2017 provides features that simplify and accelerate design work. For example, the Draw and Annotate tool now has two versions of "backgrounds" so users can choose how they want to view their drawings. The Locate tool now provides a great deal more detail than its previous version, and with multiple windows, it's easy to use any object in multiple views. "AutoCAD is a highly sophisticated design tool, but because it is so user-friendly, it's possible for non-designers to use it," said Andrew Dodgson, a professor at the University of Sheffield and a well-known British architect. "AutoCAD provides the functionality that they need to do their jobs." With AutoCAD 2017, designers can instantly create a plan or elevation view with just a click of a button. The "quick turn" feature, which allows users to make many

Q: Onclick event on ListView Item, how to pass the item's index to method I am developing a ASP.Net MVC application. I have a list that I bind with the ViewModel and use a ViewBag to get the items, but I can't figure out how to pass the item's index to the method: [HttpGet] public ActionResult Edit(int id) { var item = _entityData.Get(id); ViewBag.Result = _orderController.Edit(item); } I want to know how to pass the index to the _orderController.Edit(item). I tried using the following, but that does not work: var index = ViewBag.Result.Index; Any help is appreciated. Edit Here is my ViewBag: public ActionResult Edit(int id) { var item = _entityData.Get(id); ViewBag.Result = _orderController.Edit(item); return View(); } A: @Daniele, if you want to use the integer you need to return from the Edit method to the GET method. If you want to use the result then try something like this. public ActionResult Edit(int id) { var item = _entityData.Get(id); ViewBag.Result = _orderController.Edit(item); return View(); } Q: Adding a comment box at the bottom of a page I have an asp.net page with a lot of text in it and would like to have a small comment box at the bottom that I can use to add comments.
