AutoCAD started as a basic 2D drafting program with simple features and a low cost. When the designer's completed drawing is ready, it is transferred to a drafter's (operator) PC via an

---

RS-232 cable for printing or exporting to other software. AutoCAD also stores the drawing in a computer file called a DWG (Drawing Window Group) that is compatible with other CAD programs. Autodesk acquired a team of three designer and developers in December of 1986. Autodesk hired the team as the core development team in June of 1987. First, the project manager asked the three employees to sketch a network diagram of the infrastructure of the company. The diagram revealed a serious problem: the company had been using a different platform to develop CAD software and was being forced to build new development tools. The team developed a new architectural model and architecture of the AutoCAD software development model. The first 3D drawing was done in January of 1988, and the rest of the AutoCAD team members work on the

project started. These 3D drawings had been prepared using the client-server model of the time: the client was a DOS-based machine with a 2D mouse pointer, and the server was a mainframe computer. CAD programs were usually delivered in a single "application package", which included all needed software and data on a single CD-ROM or floppy disk. In 1989, Autodesk chose the Windows NT operating system as the base for its operating system. However, it needed a 3D-accelerated version of Windows NT for AutoCAD and other applications. Thus, the NT 3D version was released in 1990. The AutoCAD team members begin work on the NT version of AutoCAD in October of 1989 and the 3D version is released in 1990. The first Windows NT version of AutoCAD was released on November 1, 1990. The other two members of the AutoCAD team moved to work on Autodesk's 3D-

capable software applications. To enhance usability and to fit the computing world, the AutoCAD team adopted the WYSIWYG (What You See Is What You Get) editor interface, where users have a word processor-like view of the drawing document. The second version of AutoCAD, named AutoCAD R14, was released in April 1991. The third version of AutoCAD, AutoCAD

The main architectural style of AutoCAD is called "Legacy". The new architecture was introduced in AutoCAD 2011. In AutoCAD 2011 the legacy design was removed and the design is now in the new Legacy II style. AutoCAD supports a variety of floating window systems. These include a plain window floating on the desktop, window snapping,

---

resizable floating windows, docking windows, moving windows and floating windows on a 3D view. It supports a virtual window on the computer display. AutoCAD supports the ability to draw to a sheet set, which is a collection of sheets, and a layer, which is a special type of sheet. Any number of sheets and layers can be stacked on top of one another. AutoCAD supports automatic document classification, page layout, and imposition.

AutoCAD supports "outlines" which are used for marking a line on the design. The original AutoCAD introduced outlines in 1985. AutoCAD supports "cadets" which are a new type of pens which are available in AutoCAD 2010 and later. Cadets support arc, straight, spline and circular line styles.

AutoCAD supports a floating modeless dialog window. This allows the user to design a model while using another application. AutoCAD supports

---

an "xref" block, which defines the location of another drawing. The other drawing must be in the same drawing file or in a similar file type (e.g.

AutoCAD dxf file). Table of keys References

Markup eliminates the need to memorize or search for key commands. (video: 1:24 min.) Flexible, immersive on-screen drawing, no matter where you are: Autodesk's WebCAD integration delivers a wide variety of collaborative tools and devices. (video: 1:12 min.) As you know, we've been working on the next generation of AutoCAD, AutoCAD 2020 for more than two years. It's a new process, and a new product, that brings to bear all the technology and talent of the team that has driven AutoCAD since the beginning. You can read about the transition in our previous blog posts: [Working together on AutoCAD: The next generation AutoCAD 2020 for the new process](#) [AutoCAD 2020 for the new product](#) [2020 for the new process](#) [AutoCAD 2020 for the new product](#) [2020 for the new process](#) We're so excited about the future of AutoCAD that this product is our full-

---

time focus for the next three years. And we're excited to share what's coming with you. AutoCAD 2020 for the new process The core AutoCAD product will continue to be built on a continuous basis, and we're delivering major new functionality every three to four months. The transition will be smooth for you. Once you've adopted the new product, it will work as seamlessly with your AutoCAD installation as it does now with 2018. And, as with all previous versions, you will always be able to upgrade your existing AutoCAD installation to the newest version at any time. So, what's in the new process? Technology: Now that you know about the new product, you'll need to make some decisions about your current AutoCAD installation. How does the new technology provide more flexibility and better support for your existing AutoCAD environment? And how will you provide

---

seamless user experience between the new product and your existing installation? Here are a few key points to keep in mind as you make these decisions: We've learned a lot about the unique needs of designers and engineers over the past 15 years. The new process incorporates that knowledge and delivers what you need to
