I have a need to force migration of a table from SQL Server 2005 to a SQL Server 2008R2 instance. The issue is that I don't have the primary key defined on that table. I do have the primary key defined on the table on the SQL Server 2008R2 instance. Is there any way to force a migration using the SQL Server 2005 client tools to work around this issue? A: You can add to the CREATE TABLE statement that you are currently working with the following: CONSTRAINT [constraintName] PRIMARY KEY CLUSTERED ([primaryKeyColumn]); And then run the alter table script for the original table again with these changes. // RUN: %clang_cc1 -triple x86_64-apple-darwin10 -fsyntax-only -verify %s @interface
