The problem is that the optimizer waits till the end of the table scan before starting to do my read_ahead. My query looks like `SELECT * FROM destination_table WHERE id = :id`; The optimizer states that the table has 1,863,907 rows and the estimated rows returned is 86,300. As far as I can tell, the table scan has finished when the read_ahead is started, yet the optimizer doesn't consider the estimated rows so it doesn't perform the read_ahead. My read_ahead looks like `SELECT * FROM read_ahead_table WHERE id = :id` If I take a sample, the optimizer does not wait till the read_ahead table finishes, it just runs the read_ahead without waiting for the table scan to finish. `SELECT * FROM read_ahead_table WHERE id = :id` So, does the optimizer wait till the table scan has finished before starting a read_ahead for a table, or will it just run the read_ahead without waiting to see if the table scan has finished? A: According to MySQL Release Note 50541 (read_ahead will run automatically if requested by query planner, assuming that there are enough key_reads_for_rows rows returned from your SELECT statement. Key_reads_for_rows: The number of rows read from disk for each row in a query result. If the key_reads_for_rows value is set too low, the key lookup of the records in the result row may not complete before the query is executed. Key_read_requests: The number of disk reads that occur for each table row. The read_requests value is

estimated and may be too high if you have a high
read_ahead_size value or a high value e79caf774b

Crown Prince of Persia: Sands of Time Crown Prince of Persia: Sands of Time is a 2009 action-adventure video game developed by Naughty Dog and published by Ubisoft for PlayStation 3. It is the sequel to 2008's Crown Prince of Persia: The Sands of Time. A remake of the second version of the original, it has new characters, various gameplay enhancements, and additional trophies. The remake was

released on September 30, 2009 in North America and September 7, 2009 in Europe. It is the first in the series not to be published by Ubisoft, which was then acquired by Vivendi. It was released with no support for online multiplayer. Gameplay is similar to that of *The Sands of Time*, with a focus on puzzle-solving and platforming, such as mounting scaffolding onto ledges and swinging across chasms. As with the original, the game has three main stages (Outpost, City and Palace), with the Palace stage being the longest, taking place entirely within a single large palace of the evil Vizier as the player searches for and defeats his six kidnapped princesses. Much like the originals, the Palace stage features multiple characters, and enemies will fight in teams. Sand stages are similar in design and length to those in the first game. Some elements, such as the Shields and Sandstorms, which were absent in *The Sands of Time*, return.

There are two playable characters, the male hero who was originally featured in *The Sands of Time* and a new female heroine named Kasper. The new character's attacks are stronger and more versatile than those of her predecessor, with the ability to carry out actions such as pickaxe attacks and push through obstacles. The player is given the ability to skip dialogue by pressing a button as the story progresses. The primary objective is to travel through the palace, find and rescue the princesses and defeat the Vizier. There are multiple pathways through the palace, and the player may visit any order of chambers, with the exceptions of rooms adjacent to other chambers and the central chamber itself. Once the princesses are rescued, the player has the option to spare their lives; sparing them grants the player access to a bonus stage. A new feature of the game is the Ability System, where for every ten
