# Dekart Private Disk Multifactor [32|64bit]

## **Dekart Private Disk Multifactor Crack + [32|64bit] [Latest 2022]**

A critical task in any information technology process is protection of all confidential information. Often corporations organize their network security in a way that allows only authorized personnel access to the company's computer system and its sensitive data. Every employee using a corporate laptop or mobile device should know the company's policies, both legal as well as electronic, in relation to the loss or theft of that company's data. Computer users should also know how to correctly dispose of their old, damaged or obsolete computers. With the development of computer technology, it has become crucial to protect all electronic resources. One of the most popular methods of network security in use around the world is encryption of data using hardware, software or cryptographic algorithms. Dekart Private Disk Multifactor Download With Full Crack is a multifactor secure encryption program, providing user-friendly tools for secure protection of your personal computer's data. Key features of Dekart Private Disk Multifactor: - File encryption - Cryptographic algorithms are supported by this encryption software, including AES 256-bit and SHA-2 hashing. The program protects your files and folders by using a strong encryption algorithm and multiple authentication factors. It is possible to store hundreds of unencrypted copies of your encrypted files without any risk of file damage. - Multi-processor support - The encryption program will allow you to use multiple processors, giving you a greater level of file protection. - User defined white-list of

---

programs - A built-in option that allows you to protect your data from applications which do not have user-defined access rights. You can even choose to block all external programs from reading your encrypted files. - File locking - This is an application feature, which ensures that the encrypted files cannot be written to or deleted from if a file is encrypted. This will protect you from unauthorized access to files as well as make recovering encrypted files a lot easier. - Automatic file recovery - If you cannot access your encrypted files, you can recover them with Disk Firewall, a unique proactive defense mechanism that helps you to keep your private data safe. It is possible to completely recover your files even if they have been corrupted or encrypted. - Strong anti-spyware protection - Dekart Private Disk Multifactor performs scanning and filtering of all files and folders to protect you from spyware and viruses. It is impossible to send or copy files that are protected with the encryption software, making your data safe from all types of unauthorized access. - Cost-effective and reliable solution - All the encryption keys are stored on an encrypted

## **Dekart Private Disk Multifactor License Keygen Download**

Dekart Secure Recovery is a Windows software for data recovery that can recover and restore deleted files or folders from NTFS formatted disk devices. It can recover data from physical media such as disk drives, RAID servers, USB flash drives, memory cards, SSD drives and more. Dekart Secure Recovery is designed to recover and restore deleted files or folders that have been deleted from the hard drive or a portable media device that was formatted with NTFS, FAT or FAT32 file system. It is also able to reconstruct and recover any deleted files, folders or other data that were accidentally deleted. To achieve this, it uses the Windows API functions that are used to monitor file system activity and perform a recovery whenever a file or folder is deleted, renamed or moved. Dekart Secure Recovery can restore deleted or lost data from any Windows operating system on the following hard disk storage devices: □ Disk drives (fixed drives and solid state drives) such as a WD My Disk, HDD, HDD Plus or HDD Elite; □ RAID servers (disk arrays) such as a Synology, A Open Hardware RAID or a MSA; □ USB flash drives such as Kingston, SanDisk and PNY; □ Memory cards such as a Transcend, Transcend 32GB, Transcend 16GB, and OCZ, and more; □ Solid state drives such as Corsair, Western Digital, Intel or Transcend; □ SSD drives (solid state disks) such as Seagate and Western Digital; □ SSD Cloud Servers from Seagate, Western Digital, SanDisk or OCZ; □ SSD Cloud Droplets from Amazon or Rackspace. Dekart Secure Recovery does not create an image file of your disk drive when performing the recovery task, so it is recommended to perform a backup of the disk before using it in order to avoid further file system damage. However, when used in conjunction with the 64 bit version of DeStick Commander, it is possible to save your disk image in the event you need to restore the contents of your encrypted disk. Dekart Secure Recovery is able to operate on the following Windows operating systems: □ Windows 10, Windows 8, Windows 7, Windows Vista, Windows XP; □ Windows server 2012 R2, 2008 R2 and 2008. Dekart Secure Recovery is also compatible with the following hardware: □ Disk drives (fixed b7e8fdf5c8

## Dekart Private Disk Multifactor With Product Key [Mac/Win]

Dekart Private Disk Multifactor is a volume-based, on-the-fly disk encryption software, which enhances the strong NIST-certified AES 256-bit encryption algorithm with a second and third biometric authentication factor—a smart card or token, and a biometric device. It is possible to use only two authentication factors, namely a PIN code protected USB token or smart card, used to store all necessary data to decrypt the encrypted data. You can at any time decide to start using biometric authentication, the third factor. Smart card and biometric technologies take data security to the next level, making it impractical to conduct brute-force attacks. A smart card or token will block itself after an incorrect PIN was entered multiple times; while biometric verification ensures that even if the PIN of a lost or stolen token is known, the data are still well-guarded. All this makes Private Disk Multifactor the best secure data storage software to prevent unauthorized data access. You no longer risk forgetting the password, as all encryption keys are securely stored on a PIN code protected smart card. This ensures that critical business information will never get into wrong hands. The contents of a virtual disk are additionally protected by Disk Firewall, a unique proactive defense mechanism that guards your private data from Trojans, viruses or other types of malware. The Firewall controls which applications are allowed to access the encrypted drive. If a specific application is not found in the user-defined white-list of programs, it will be unable to read or alter the contents. Here are some key benefits of "Dekart Private Disk Multifactor":

- Hacker and virus protection—your confidential information will not be sent across the Internet.
- Anti-spyware — your confidential information will not get intercepted or altered even if your antivirus didn't manage to detect the threat.
- Anti-theft protection—your private data will not be stored on a USB key or sent across to another device if your token is lost or stolen.
- Cost-effective and reliable way to achieve Sarbanes-Oxley and HIPAA compliance
- High-level security — protects your encrypted data from viruses or other malware even if your antivirus didn't manage to detect the threat. This encryption software supports a wide range of smart cards, tokens, and biometric devices, making it easy to choose the hardware which suits your needs in a better way.

### What's New in the Dekart Private Disk Multifactor?

Download Dekart Private Disk Multifactor now and start enjoying powerful file encryption. Dekart Private Disk Multifactor includes lots of handy features:

- ◆ Multifactor authentication — smart cards, tokens or biometric devices — provides yet another level of data security. It is impossible to use brute-force attacks against data encrypted with the aid of biometric devices, tokens or smart cards.
- ◆ Disk Firewall — with the help of this feature, Dekart Private Disk Multifactor makes sure that your confidential data are never sent over the Internet.
- ◆ Task automation — Dekart Private Disk Multifactor makes your daily tasks much easier. You can launch all encrypted disks at one click, launch set of encrypted files, launch your backup to another media or several other applications.
- ◆ Password protection — with the help of this feature, you can control which users have access to your disks. They can view or even change your passwords, but they can never open your encrypted files.
- ◆ Wiping data — it is impossible to recover encrypted files, even when the password used for this data is known. Files you haven't yet opened and closed are also lost forever;
- ◆ Timed backups — with the help of this feature, you can automatically execute a specific set of applications at a specified time.
- ◆ Compressed backups — with this feature, you can encrypt whole disks or folders, including their contents. You can have two backups: one compressed, which is better for downloading over the Internet, and another non-compressed, which is much smaller and allows you to keep your encrypted data at your fingertips.

Dekart Private Disk Multifactor System Requirements: 2 GHz processor, 1 GB RAM Microsoft Windows x64, Windows XP or later versions A smart card, token or biometric device An Internet connection 2 GB free space on your hard drive
