Jurgen Klopp's side have lost their last four matches and have drawn just two of their 17 Premier League games Liverpool were described as "tough nuts" for challenging for Champions League qualification by Fenerbahce manager Michael Lainer on Sunday - but not for their decision to part company with midfielder Emre Can. Can is a key player at Anfield having arrived from former club Bayer Leverkusen in January 2016, but the Germany international has started just eight times in the Premier League this season. The German is expected to leave in the summer, with Klopp ready to cash in on the 25-year-old. "Can's future?" asked Lainer when asked about Can after his side's 1-0 win over Hoffenheim. "He will stay at Liverpool. I believe so. But who knows? It's a very hot and annoying market. But maybe there will be a solution to keep Can. I believe they will." Liverpool are yet to appoint a new manager as Jurgen Klopp departs to manage Borussia Dortmund in the Bundesliga, with his assistant Zeljko Buvac set to take charge until the end of the season. Can has been linked with moves to Chelsea, Manchester United and Paris Saint-Germain, with whom Can had an extended trial in January. "Can will still play for Liverpool," Lainer added. "I don't think he's going to the other big clubs. "Can is a wonderful player, but you need to concentrate on the team. He's a very good player but the problem is you have to concentrate 100 per cent on the team." Fenerbahce beat Hoffenheim 1-0 after a slow start and Lainer was pleased to see midfielder Henrikh Mkhitaryan excel in his first start for the club. Germany international Mkhitaryan left Manchester United at the end of last season for the Istanbul giants, with Fenerbahce unable to register their former player in time for this season's Champions League qualifiers. "I think he's a special footballer," Lainer added. "He's unique because he uses the ball, he looks like this or that, and he's fast. He can change the situation. But he's not 11 and he's not 26 - he's 23."Particularly in the area of water treatment and water purification, chlorine dioxide is often used. The introduction of chlorine dioxide into

The presence of markers of hepatitis B was also investigated in all of the patients. A total of 16.7% of the patients were infected by hepatitis C virus.
