=============== "Legacy" means continued support for the game, essentially continual updates with new content, new items and new features! The "greenTech" Edition does include a few enhancements that are fully integrated into the main game -- the greenTechEnhancements.txt will be updated when new content and features are added to the main game. Escape into an exciting new sci-fi action RPG set in a seemingly ideal, advanced society. You play the role of an underdog, a hacker who's slowly building his reputation and skills by using his unique skills to help others. As you play, you can plan, create, and destroy your way to victory. Legacy of the Alchemists is built from the ground up for VR! When your technology meets its time to retire, what will you do? With the power of your mind, break the status quo. Do you dare to decide for yourself who will live and who will die? Fully immersed in VR, the title features: - VR-specific gameplay: turn-based combat, puzzles, role-playing elements and more! - 7,000+ places to explore, not counting the map in the Main Menu. - Dozens of ways to fight. - 14 weapons and an assortment of tools, from melee to ranged and kinetic. - Music that adapts to your playstyle and enemies. - New planets and a new story set in the past! - A new system of character customization. about our new map pack: ========================= "The Afterglow" is an update to the "Legacy of the Alchemists" full-sized world map, adding a few extra bits, and mostly being a prettier place. Feel free to take a look, try out the new places and let us know what you think! Improvements: ============= - Added a few new places, including a "demon's den" and an experiment that binds souls to a device. - Added a new event that triggers when the player exits the map. - Added a few pieces of new art. Changelog: ========== v0.5.11- Fixed an occasional bug with arrows when the player goes invisible. v0.5.10- The tag "Compatible with VR" no longer appears when you bring up the map in stereoscopic. v0.5.9-

Features Key:

One of the best looking level maps ever!
Incredibly detailed models, weapons, areas, weapons, horses, vehicles, player models, environment, and effects. (plus the mod offers great bike and tank customization, skins and hats.)
Over 7 hours of gameplay
Non-trivial level design complexity, offering 18 different areas and levels, many secret areas, and more than 15 possible routes to any area.
The Gold Player skin is really a Bonus skin-solution for both teams(human or modded)-really-just because of his massive parts list it's difficult to add content without having part dependencies, but I must say I was really happy to incorporate him into the mod, because it made the races and missions actually worth playing.
Many many hours of local-and online (IP Matching)-testing as well as bugfixes/tweaks for both release.

GTA San Andreas Mod Overview

(More are coming up soon!) + Show Spoiler [4 Race Modes] + Ultra Mod - No Car Airplane - No Airplane Bike - No BikeQ: How to clean manually installed compact framework assemblies? I have a hybrid application where

the bulk of it is a well-behaved web application written in the regular.NET framework. But there are several smaller pieces which are compiled and installed manually. I need to fix a bug in one of these pieces, and it won't compile on the CI server. The system has two registered frameworks:.Net framework 3.5, and compact
