And despite what you've heard, you're much safer swimming with them than with a shark. There are three reasons this isn't as scary as it sounds. One, the skin of the whale shark is covered with bony plates (hence the name, the scientific name is Rhizoprionodon taylori, named in honour of Mark Taylor, the guy who discovered them in the Gulf of Mexico), and two, they don't bite. On the rare occasion that they do it's usually to investigate something curious. Once the bony plates have a sense of what they're dealing with, they'll usually leave you alone. It is possible, however, for a whale shark to bite if you're

Previous studies indicate that casein protein contains growth-promoting substances. In the present study, we have found that partially hydrolyzed casein can stimulate the growth of breast cancer cells in vitro and in vivo. The growth-promoting activity was attributed to a component of casein other than the phosphorylated casein hydrolysate, casein kinase I-mediated release of calcium from mouse mamm
