or political purpose, even when one cannot decide which is the better explanation. A media or an education campaign can be associated with a certain ideology, but the same can be said of a pop song or a commercial. Even an exhibition can be used for political purposes, as in Nazi Germany, when nature was symbolized as an ally of the Third Reich, or as in the United States, when the American naturalist John Muir was enlisted in the cause of conservation. The relationship between democracy and the arts is not that simple. The artists and intellectuals of the nineteenth century embraced the democratic values of the French Revolution, but they did so with all the fears of a reaction in the wake of the Terror and the guillotine. The revolution and the spread of democracy in the rest of Europe were associated with catastrophic changes, including the disappearance of feudalism and the nobility. And as democratic values in general spread, artists and intellectuals also questioned the true value of a democratic education system. Whereas the Marxists, who were the dominant political force in socialist democracies, argued that democratic systems encouraged a public culture, the democratic Marxist Marcel Duchamp (1887–1968) famously declared, “There is no art.” After 1900, artistic forms were accepted by governments as instruments of national culture and displayed in museums, but the avant-garde artists of the era, such as Apollinaire and Picasso, who embraced new ways of creating art, distrusted democratic institutions and popular culture. In the twentieth century, art became increasingly associated with the values of modern life, including technology, modernism, and consumerism. The democratization of artistic forms and institutions began around the late nineteenth century, with the spread of art schools. After the Second World War, even highly conservative governments like the Polish or Argentinian helped to disseminate art by nationalizing the museum system and sending artists to all parts of the country. At the same time, western commercial art galleries spread across the world, no longer confining themselves to the one or two cities in which they had once been located. The diverse career options available to artists in western countries also contributed to the democratization of the art world. In the past, artistic success was often very closely linked to family wealth or the aristocratic patronage of the aristocracy. This continued to be the case in Asia and Africa, but once the western world industrialized, it became possible for artists and intellectuals to rise to economic prosperity and artistic recognition by merely being talented. The twentieth
