But behind the controversy lurks a broader lesson: The bad economics of both things — the complexity of the former, the risks of the latter — reflect society's failure to have open, frank discussions about the difficulties of advancing, at all, in our technocratic age. As Obamacare and fracking illustrate, governments often make decisions that have consequences they are only dimly aware of. The costs of line former spill far beyond the terms of the healthcare law. When the government forced GM to go bankrupt, the auto industry was temporarily stranded. The shale boom has created a global oil glut that has in turn created a glut of U.S. oil-drilling rigs and has brought on a new wave of American rigs, but also an oil-storage glut. Producers in Texas and Oklahoma are rushing to take advantage of the glut by going into overproduction. The economics of the glut will likely change once they slow down, but meanwhile it casts an ominous shadow over the industry and its future. Fracking has a cost to the environment, but it has a host of benefits in addition to its cost that are also only slowly being understood. Advertisement: So it is with big business. We often think in terms of technology advancing, ideas being developed, and enterprises being powered by the advance of technology and ideas. But really, advances come at a price, and they don't always pay off. And sometimes they don't even pay off for those who hoped they would. For example, the New Deal was touted as a big fix for economic inequality, but the sweeping reforms and regulatory measures in that era amounted to an equal and opposite reaction that probably led to more inequality in the long run. It's possible that a government could craft a massive program to help the poor, and the program might e
