
Sugar.Bytes.TransVST.v1.0-R2500golkes !!TOP!!

Sugar.Bytes.TransVST.v1.0-R2500golkes Activation CodeConjugates of proteinaceous compounds and polysaccharides, including one or more proteinaceous compounds, such as proteins, and one or more polysaccharides, are known in the art. The conjugates are known to have various desirable properties, including improved stability, gelling characteristics, hydrolytic stability, storage stability, and the like. The conjugates disclosed in U.S. Pat. Nos. 4,642,237, 4,853,522, 4,997,817 and 5,128,031 may be produced by contacting one or more proteinaceous compounds and one or more polysaccharides under conditions sufficient to cause reaction between at least one of the proteinaceous compounds and at least one of the polysaccharides in the absence of any other chemical functional groups, and with the exclusion of all other chemical functional groups. In these conjugates, the polysaccharides and the proteinaceous compounds each comprise a plurality of carbohydrate units (and preferably a plurality of the same carbohydrate units) and a plurality of amino acid units, respectively. In the polysaccharides, the individual carbohydrate units are preferably each linked to an adjacent carbohydrate unit by a glycosidic bond. In the proteinaceous compounds, the individual amino acid units are preferably each linked to an adjacent amino acid unit by an amide linkage. In one specific embodiment, the conjugates are substantially hydrolyzed to form a product comprising non-reducible conjugated xcex1-1,3-glycosidic linkages between at least one polysaccharide and at least one proteinaceous compound. The conjugates disclosed in U.S. Pat. Nos. 4,642,237 and 5,128,031 are typically produced by contacting a first of the polysaccharide and the proteinaceous compounds, and a second of the polysaccharide and the proteinaceous compounds, under conditions sufficient to cause reaction between at least one of the polysaccharides and at least one of the proteinaceous compounds in the absence of any other chemical functional groups. The contacting occurs for a time and under conditions sufficient to form the conjugates. The contacting conditions disclosed in U.S. Pat. Nos. 4,642,237, 4,853,522 and 4,997,817 are for time periods of about 10 days or more,
