Epinephrine (Epi) has been shown to cause apoptotic cell death in the liver, due to p53- and caspase-dependent pathways. However, the transcriptional response of hepatocytes to Epi still needs to be investigated. The aim of this study was to evaluate the direct gene expression response in hepatocytes after Epi treatment using Affymetrix human U133 plus 2.0 microarrays. HepG2 cells were treated with Epi (10(-6)M) or ethanol (EtOH, 10(-6)M), alone or in combination for 3 or 12h, with a control treatment lacking both substances. Among the genes that were influenced, 22 upregulated and 27 downregulated genes were identified by microarray analysis. Further validation of 6 randomly selected genes was performed by real-time PCR. The results confirmed microarray findings. Here we demonstrate that in human hepatocytes 595f342e71
