Editor's Note: This post was originally published on December 15, 2012. Many time-starved architects and designers are turning to the cloud in their quest to find better ways to get the work done. I've seen it myself in my work as a freelance designer: co-workers send me links to great tutorials that can help them get better done faster. Now, thanks to Anoushka Bello's excellent How-To Geek article, we can share all of those great cloud-based resources with you. 1. Trimble SketchUp—$45/year If you've ever tried to share and edit SketchUp designs online, you'll know that the community is quite small and the way people use SketchUp really depends on the capabilities of each person. Trimble SketchUp offers a good cloud-based solution for sharing designs and making edits that anyone can use, from Microsoft's new Windows 8 operating system. SketchUp includes a one-stop place for all of your files, so you don't have to worry about backing them up—your designs are automatically saved and online. That's just the beginning. SketchUp also includes a fully customizable 2D toolbar for accurate sizing and placement of 3D objects—with a few clicks you can turn virtually anything into a 3D scene. SketchUp is a powerful and intuitive tool for creating 3D models and publishing them online. You can easily share your projects with colleagues, friends, or the SketchUp community at the Trimble SketchUp website. 2. Google SketchUp Pro—$30/year If you don't already have a SketchUp license, the "pro" edition is a great way to learn the tool. (Or if you already have a SketchUp license, you can use SketchUp Pro to export, save, and share projects.) SketchUp Pro includes 2D and 3D templates and is fully compatible with SketchUp. It's easy to navigate and customize, with tools to cut, copy, move, and rotate any object in your model. The third edition includes the key features of the pro edition plus an improved 3D modeling tool. SketchUp Pro is a good way to start using the SketchUp interface before buying the full version. 3. Mozilla Firefox—free Mozilla Firefox is a web browser that's fast, customizable, and powerful. A huge amount of design and development talent has been focused on making Firefox work well with

There are a number of localised criminal gangs in Ireland that are involved in the provision of prostitution, according to a garda investigation. The investigation was commissioned by the Garda Confidential Line (GCL) in Dublin in order to discover the extent of prostitution and the involvement of criminals in the crime. Gardaí say that prostitution is widespread throughout the country and that most localised criminal gangs are involved. The GCL received about 70 calls in a recent period, which was a substantial increase on previous years. Gardaí say there is a lack of awareness of the scope of the crime and of the seriousness of prostitution within the general public. A number of approaches have been made in order to tackle prostitution, which has been proved to be an extremely lucrative business. "The number of calls has increased significantly during the last number of years, so this indicates to us that the public is becoming increasingly aware that prostitution is a serious and growing problem that not only affects individual women and girls, but also has a detrimental effect on the wider society," a garda spokesman said. "We wish to identify a link to the actual criminal elements that are involved in the related activities and are involved in the money laundering activities as well."At first glance, the idea of a summer bbq festival might seem like a dream for any average barbecue aficionado — until you try to actually cook the food you've been slaving over in the backyard. Unprepared cooks often complain of overcooked veggies and burnt food. The straightforward truth is that cooking under the heat of the sun can take some getting used to. Whether it's using a gas or charcoal grill or the wood burning element of a barbeque, knowing the right cook time is important. For years, a lot of cooks have used the clock method to determine when to add new ingredients and turn the meat or turn off the flame. But the clock method isn't as accurate as measuring and timing. You can also use an accurate meat thermometer and a timer to help you. The most accurate method is to use a digital or analog timer. There are many options available for the size of your outdoor space. They are typically wireless, battery operated, and offer basic timers that tell you when to add another ingredient or shut the oven or barbecue off. You can program them for specific tasks such as setting times for different meats and vegetables or baking, as
