Fantasy version of King Tycoon! Core game is a worker placement: You build and manage a company, where your workers produce the things you need to succeed. You start with 6 workers, but you can hire and fire any time. Your goal is to fill production capacity. You can purchase new workers for a price, and fire "unproductive" workers for even cheaper. If workers don't like their job, they can quit for more money. In the meantime, your workers have lots of things that they want and need. You hire a team of them to build any of the available production lines to the highest standard. If it's not, they return to your company! One of your workers can also build your business, just like a miniature corporate edifice. Each one is better than the last. The most exciting one can sometimes cause your company to go into an inevitable tailspin. You can also build an ugly office building that nobody wants to work in or a new apartment where your workers can relax after a busy day. Your workers need food, water, and occasional breaks. You fire all the workers when they are not needed. They become lost in the current job queue and you hire them again when their job is available. You can build a computer programming line too, as well as various other things. Make sure your workers focus on just one line, as they will only work on the fastest and best one. You can also build a hardware store, where you can buy just about any spare parts your workers need. Of course, you also need salaries to compensate your workers! Should you manage to stabilize your company, you can even hire a lawyer to fight your competitors. Need another worker? Just click on the red square and hire more! FEATURES- - 6 different workers - 2 different status meters - 9 kinds of industry, from manufacturing to brewing to accounting - 4 production lines (one for every worker) - 7 office buildings (one for every worker) - 17 apartment buildings (one for every worker) - 9 hardware stores (one for every worker) - 9 book stores (one for every worker) - 4 programmer lines (one for every worker) - 8 lawyer lines (one for every worker) - 55 skills - 4 mouse buttons - 9 busy worker icons - a retirement calculator - 7 different worker stats - 8 different worker stats - 8 different worker stats - a

This is simply a small project I developed for myself to test out if I can get MSSQL running on a Win2K system. These days 90% of the PC's in my office run Win2K and enjoy playing this game with someone. So here we go - NO MSSQL install, no SQL server component installed on the PC and the code is compacted to about 2000 lines! So here's how it works (assuming the obvious):

--CPU: Easily installable via Click2Run.exe

--Game screen: Runs in full screen and requires only 1 MB RAM.

--Movement: Gun moves smoothly using mouse.

--Controls: Arrows control weapons and back/forward movement.

Having tested this for a few weeks now and released via the web (link below) I hope this can help anyone who has got a MS Win2K system (in my office we have about 30 MSSQL Server running), I have a lot of ideas how I could expand this project but this is a starting point for anyone who wants to see how it's done.

Hopefully in the near future

As a manly man with a family, after you had an accident that got you sick, you will go into hospital for healing. In this time, you meet a girl named aarati and after that, a stranger named tapi. See how the fate of this couple will be. Promise of More: There is a promised of more, that depends on how you play the game. Features The more you play the game, the more the decisions of this game is complicated. Heroes can make decisions and actually get a family. The decisions of heroine is a mother and a father. A multitude of events, leave you deeply moved. As it is a simulation, the decisions that you make and how you make those decisions affect the game. The fate of people and animals' life is at the mercy of you. As a result of certain events, your family will get sick. So if you meet certain sick person who gets sick after hearing certain words like "Arati", your family will become sick. In the process of getting healed, the more you love your family, the more they'll be able to get healthy. In this game, the more people who use kalibei, the more magic power the person can get. At first, you can use common magic to heal people. After you get certain magic power and you get rid of your ailments, you can choose to use the even more powerful magic to heal people. A magic power meter, and if you use the magic power, you will get a bar, after that you can choose to use the power for healing other people's illnesses. The more magic power you use, the more effective it will be. Amongst all magic power, you will need to think carefully when you use the special magic. There are some things you cannot do by using magic. For example, you cannot drink liquor, you cannot use drugs and you can't look at a woman. Special magic is divided into five types, each type has its own effect. If you use the special magic, there is a special effect on the floor. Also you will have specific results on the special effects. If you use magic power, the more people who uses it, the more powerful magic power you can get. What's new:

Features Edit: the comments are an active resource, and I've received a lot of valuable feedback. I've also read through the comments section on the blog post and have been able to clarify some of the more complex issues. In particular, the clip art was chosen because I thought it would show up well on iPhones and iPads. I have since re-read the comments and am finding that while a lot of people may not use ALL of the features of the program, there are plenty of people who find the features they use valuable, and I want those people to know that they can find all the features, even though some of them may not be readily obvious. The only limitation is that the process is a little different for people with a Mac as opposed to Windows. Also, I do not currently recommend buying this code; in all honesty, I have not even tested this program on my own Mac. Let's get started, shall we? There are a number of things that are included as part of the code: A character creator: (This currently works on Mac and Windows) Character stream editor: (This currently works on Mac) The player code: (Windows and Mac) Music (both MIDI and MP3) Swiff clip art A README file and an executable file Useful program notes: What is included: Everything you see on this page will be included in the zip What won't be included: The player code The character creator Possibly music, but it hasn't been fully tested. Saves and progress Saves are done through the use of SFS (VFSX (Mac only) or PFS) files. On the Mac, we use SFS files as they are more conducive to rotation and will support most expansion packs for the game. On Windows, we will

convert.sfo files to.pfs. There will be a way to import sfs files; you might need to update your sfmgr tool in order to do this. Saves will be saved in a folder called "saves" that will be created when your game is started Saves are done automatically, when your game exits all existing saves will be loaded Data will be saved within the save directory Currently, the save code is inside your game, in order to maintain
