I have a farm of Sharepoint 2010 and have a solution that contains many site collections that are organized under sites with different namespaces for each namespace. For example: xxx\Documents xxx\IT xxx\Marketing xxx\Support I have also just recently migrated everything to one environment running Sharepoint 2016. I have a Central Administration site called "Admin". Is it going to be a problem moving all these site collections into this location? Update: Since migrating to 2016, I've discovered a site collection called xxx\xxx that was not found in 2010. I'm going to create the site collection in the new location to test out the new naming rules. A: No, there won't be any issues moving your site collections from 2010 to 2016. Site collection includes parent site + subsites (site and sub-site level) it does not means the type of site. So, you can change the site collection at any time and in any farm. Q: Triggering event from element in container class I have this markup:
