Nanoparticles (NPs) of different geometries and compositions are emerging as a powerful tool to enhance the efficacy of anticancer therapies. Their advantages over conventional therapeutic approaches include enhanced cellular delivery and selective targeting. The most significant impact of NP-based drug delivery systems is the ability of NPs to overcome cellular barriers, such as the

blood-brain barrier and the blood-retina barrier, and to target tumor microenvironments. Both passive and active targeting strategies are being actively explored to overcome tumor heterogeneity and to maintain the enhanced permeability and retention effect. The potential of NPs to enhance the therapeutic indices of antic 6d1f23a050
