the grand theft auto series introduced a new type of glitch to the gaming world: the glitch-jump cheat, which lets you take off with a rocket pack attached to the back of your vehicle, or at least accelerate away with your vehicle rumbling away behind you. this cheat has spawned two main forms: cheats which allow you to trigger the jump cheat and cheat which allow you to remove the rocket pack from your vehicle and use it normally. with the exception of v1.3 of the rockstar launcher, cheats that allow you to remove the rocket pack from your vehicle are not available in san andreas, and they are never available at any stage. for these reasons, it can be difficult to know exactly what you are doing when you get into a vehicle with a cheat for the first time. gta san andreas - the pc cheats are a series of cheats that allow players to modify the game without the use of third party cheats. these cheats

can give the player many benefits ranging from a faster vehicle to cheats which can add and remove items. these cheats work on windows operating systems only and are implemented through the use of an online cheat engine which can be downloaded onto a windows based computer or the xbox 360's kinect. the gta san andreas cheat engine will appear as a 3rd party item in the main menu of the game and can easily be enabled or disabled at will. the gta san andreas cheat engine is a free utility that allows players to cheat in the pc version of grand theft auto: san andreas. through the use of a key generator, the cheat engine allows players to have the use of over 250 different cheat codes, ranging from simple to complex. it is also possible to disable cheat functions, thus limiting the impact of the cheat engine.
