enclosed license terms, also at activation required single license 32 64-bits on usb 3.0 most of these issues are fixed, and any remaining issues will be fixed by mid-april. but it's worth reiterating that the majority of people who use these devices and upgrade to sp1 will experience no issues at all. in rare cases, a configuration change or maybe a driver reinstall might be required. but that's the extent of it. most of the problems are with audio drivers, zipkin told me. but people who have those devices will likely have a smooth install. you may have to reinstall a driver. but we also have service pack support techs who can handle these issues as well. that's an important point: because microsoft offers service packs to customers, they support them directly, regardless of how you obtained windows vista. so you've got free email-, online chat-, or phone-based support waiting for you if something does go wrong.

## **WINDOWS VISTA PREMIUM X64 SP2 FINAL ENU APRIL 2017 {Gen2} 64 Bit**

this is amazing, ms gave us no warning on june 1, 2016 that this was going to be released and today is april 25, 2017 and i still have no idea what vista service pack 1 (sp1) is or how to get it. but i do know this is the big thing i need. if you have sp1 then update your drivers. if you dont and want to then you can do the following: i know my 64 bit x64 vista already has sp1 though when i did an upgrade i was able to uninstall sp1 before i upgraded and used the upgrade assistant. so i think if you are running x64 vista you have sp1 and are saying you want the update without sp1 you might as well run the upgrade assistant. after i get it downloaded i will report results here. the first thing that was totally a surprise was the size of sp1. sp1, as we know, delivers significant performance and stability improvements, new features, and security enhancements. but sp1 does not come with any release notes, so it is impossible to know exactly what you will get by installing this update. i'm not sure what the point was. kills all viruses and spyware get updates to microsoft security essentials and microsoft defender and keep your computer virus-free all security updates for windows vista sp1 can be found under the windows vista core support or windows vista enterprise support tabs on the microsoft support site. briefly, it's a strong installer. it lets you choose the drivers that you want to use, but it only shows you the option of installing the right, third-party drivers. sometimes that's enough to get a system to boot, but you've still got to get it usable.
