PC-Optician was used to process the scans of the image to be printed. Raster to STL was done by translating the RGB values from the image to OpenSCAD variables with the color plugin. The model was built with OpenSCAD 3.2.1 and exported as an STL file. The file was sliced using the Slic3r software, which translated the STL file to an OBJ file. The model was exported as a multi-layer Dxf file with the following settings: layers, 5; set spacing 0.25; all else, 100% The model was cleaned up and exported as a OBJ file. The animal and the animal skull were separated in the software. The volume of the animal was calculated and 10% of it was deleted to adjust the scale of the graphic when stitching the layers together, because the surface of the animal was about 100% of the volume. It was exported as a triangulated point cloud in the OBJ file format. PC-Vista Pack was used to export the model to the STL file format. Raster to STL was performed using it so the model could be imported in the another application software. The file was sliced using the Slic3r software, which transformed the STL file to an OBJ file. The OBJ file was exported as a X3D and PDB file. Nursery was used to remove the background. Raster to STL was done with PC-Optician. The model was sliced using Slic3r software and the surfaces and the interior of the skull were separated into three layers. The outer layer, which included the head, was stitched into a single layer. The final file was saved as an STL file. The same file was sent to a 3D printer as a reference file. Click 'OK' and Bluestacks will start downloading the application for your PC. When the application is completely downloaded and installed, you will see a new pop-up box. Click the 'OK' button in the box. 5ec8ef588b
