that's important because when you look at the basic functions that gis supports, they're fairly basic. it's going to give you the ability to add a map, display the map, zoom in and out, save your map, and so on. the basic elements of the basic functions are really going to work no matter what data you load into gis. you're not going to be able to do anything with your data that you couldn't already do with a gis or that you couldn't already do with an electric that's more tied to the electric standards. the more advanced functions, however, are tied to the type of data that you're trying to load. so as soon as you load this data in that particular format, your data is going to be loaded into gis and you're going to be able to use the more advanced functions of the more advanced functions. and that means if you load the data in a comma delimited format, you can't use any of those functions. you can't use the functions that are available for tab delimited data, you can't use the functions that are available for shape files, you can't use the functions that are available for a number of other formats. so when you load data into synergj, it's going to actually allow you to use more of the advanced functions, but it's going to also restrict you. you're not going to be able to use the functions that are specific to the data type of the data that you've loaded into synergj electric. in order to use those functions, you're going to need to use the data in a specific format. that's a key difference between the data model of synergj electric and the data model of gis.

it is recommended that you use the program in its 'test' mode. in this mode all of the functionality of the software is displayed, but you can run experiments that you normally would not be able to run in its 'run' mode. the software is also available for use in a wide variety of conditions such as the following: ambient temperatures from -20 °c to 80 °c, with a maximum operating temperature of 100 °c, ambient humidity from 0 to 100%, with a maximum operating humidity of 80%, ambient pressure from -2.4 psi to 28.1 psi, with a maximum operating pressure of 28.1 psi, ambient gas concentrations from 0.5% to 1000% oxygen, with a maximum operating oxygen concentration of 250%, ambient electrostatic fields from 0v to 250v, with a maximum operating voltage of 250v, ambient acoustic fields from 0hz to 100khz, with a maximum operating frequency of 500hz. each of these parameters can be independently controlled and monitored through the software. loaded with the latest version of our charting, graphing, and reporting tools, synergiee electric is the platform for complex electrical applications. the data in the form of voltage and current/power can be graphed and analyzed, as well as exported to a variety of formats. via the software you can compare two or more experimental setups to determine which produces the greatest effect. all of the data is also stored in the form of a.csv or.xls file. generate reports in the form of charts, tables, and bar graphs and even export to various file formats such as.pdf,.jpg,.tif,.jpg, and.png. 5ec8ef588b
