A complete overhaul of both the pre-defined collections and the Auto-save feature. Perhaps the biggest change is the ability to save to an unlimited number of location. This proves extremely useful if you're moving the clouds from one segment to another – or the studio to the garage. My biggest gripe, however, is with the new Adobe Camera Raw features. This expansion seemed to be a rush job. **Change:** The green auto exposure noise reduction filter is still purely a visual aid. Once you see the effect, you'll want more of it. The other side effect is that it's extremely hard to remove once you've gotten used to it. **Change:** The Color Imbalance panel setting was moved from the main Color panel to the Channel Mixer panel. It's nice that it's moved, but now it's duplicated and overwrites either the overall curve settings or the normal curves, which is confusing. The Channel Mixer panel now has black and white, RGB, and greyscale curves. One of the downsides to this new set up is that there's no easy way to set the sRGB gradation curves. **Change:** The Transparency panel has been replaced by the New Layer Mask feature. If you're using most of the advanced editing features, I think this is the best change – the feature set is similar, but it's much quicker to control. I run Photoshop every day. My main desktop running Windows is a beefy workstation earning the company . It sits next to my wife's recently dead MacBook Pro which I typically put aside for too-boring games and console play. I picked up a sleek white iPad Pro last month, replacing an aging MacBook Air with a similar specs but no puny keyboard or dock and no pen. My favorite tools are in Photoshop, and I've taken to sketching schematics in good ol' heidelblog. The iPad Pro has become a masterful sketching and drawing tool for me.
