"Redesigned", the Control Panel has been completely re-imagined; the new control panel can take advantage of all the awesome capabilities of connected devices, versus being stuck on a desktop computer for image editing. The new Control Panel has been completely overhauled to include new audio controls, metadata, keywords, and quick access to popular features like Levels, Curves, and Smart Sharpen. With Share for Review, users can collaborate on projects interactively without leaving Photoshop. Previously, Photoshop used pre-defined presets that grouped similar colors, and resized images automatically at a resolution that's ideal for a particular device. This is no longer an option. Using Sensei, Photoshop is smart enough to figure out the best resolution for the canvas on your screen when you hit "Share for Review," with the "Share for Review" preset being one of the preset options included for convenience. The choice is entirely yours. Additionally, users can now share just by clicking on a particular object, or using hyperlinks to drag and drop selected content into other applications, such as OmniPage or Omnigraffle.
