Saving your project as a Cloud Document enables you to work on it in the iPad version of Photoshop as well as on other desktops. Cloud Documents are saved instantly and allow collaboration among multiple creators, with the Invite to Edit option. You can also create a link (using the Share for Review beta feature button) to a web-hosted version of the photo where collaborators can comment. The upside is that you get to make art on the iPad while simultaneously working on your photographs. The downside is that the categories of files, based on "Sketch Elements," "Sketch Frames," and "Sketch Tools," are somewhat arbitrary, and I have not found any way to create individual folders for each of them. But on the whole, it's the best drawing application on iOS. I have used Photoshop for over 30 years. It has not received a single update in a decade and still can't beat GIMP for speed. When it comes to the different media types for Photoshop, it is basically the same. You can use a variety of different media types. The most common being Photoshop PSD and Photoshop TIFF. PSD is the Photoshop format that is used for creating and editing images. PSD is saved in either a layered or tagged file format. The downside to PSD is that it is difficult to edit outside of Photoshop. Another problem is that it is hard to view outside of Photoshop, but you can easily view it in Photoshop. TIFF is a file format, specifically a Portable Network Graphics (PNG) file. PNG is a lossless format and so it's easy to view, but difficult to edit. If you are using Photoshop to edit any of your images for digital work and need to send it to print then you need to save it in the TIFF, or Portable Document Format (PDF). PDF is a standard for publishing documents and has great document archiving features. So once that image is saved, you can print it out and it will be very clear. 933d7f57e6
