Idiopathic sudden sensorineural hearing loss is a diagnosis of exclusion. The etiology is poorly understood and treatment is largely supportive. We report a 17-year-old patient with influenza vaccination-related idiopathic sudden sensorineural hearing loss. The patient was treated with steroids, and his hearing level improved within three days. The relationship between vaccination and sudden sensorineural hearing loss is not established in the literature and may be seen with any type of vaccine. The observation shows that the patient's hearing loss was caused by vaccination. The relationship between vaccination and sudden sensorineural hearing loss is not established in the literature and may be seen with any type of vaccine. The polyols polytetramethylene ether glycols (PTMEG) and polyoxyethylene polyols, such as polyoxyethylene glycol (POEG), are used in polyurethane elastomers for their softness and smoothness. PTMEG, in particular, is used as a constituent of a polyurethane elastomer for seats, pads, bumper coverings and in toys for children due to its low viscosity and ease of manufacture. PTMEG is available commercially from Union Carbide as Lubrizol PTMEG (LT-2959-06). Polyoxyethylene glycols are available commercially from Union Carbide and Exxon Mobil. There are two general methods of producing PTMEG. In the first, phenylglycidol is reacted with formaldehyde to form 3-methoxymethyl-1,2-epoxypropane. This is then hydrogenated, for example in the presence of a noble metal catalyst, to form 1,2-epoxy-3-methoxymethylpropane. The hydrogenation is conducted in the presence of a strong base such as aqueous potassium hydroxide or caustic potash. The 1,2-epoxy
