FileCommander is a small-sized and portable file manager that provides a handy set of tools for performing file operations, including multi-screen viewing mode. Since installation is not a prerequisite, you can drop the program files somewhere on the hard disk and run the executable directly. It is also possible to save FileCommander to a USB flash disk or similar storage unit, in order to run it on any machine without prior installers. What's important is that the Windows registry does not get updated with new entries, and no additional files are created on the HDD, leaving it clean after product removal. The main application window contains four tree views by default, and you can switch to one, two, or three panes. Its context menu contains similar options to Windows Explorer, along with new ones. For example, you can swap or match windows. It is possible to copy or move files to other locations, create MD5 signatures, select files by extensions, quickly compare two windows, view console details, change the visual theme, as well as show a file preview window. Other options of FileCommander enable you to edit a list of tools to be used for web browsing, editing pictures and text, and others. By default, FileCommander detects the programs installed on your computer and automatically sets them as default. From the "Extras" menu you can view currently active processes, installed software and drivers, open a DOS command window, split or synchronize files, use a search function with file masks, as well as add or remove virtual hard drives. As far as program configuration is concerned, you can enable FileCommander to autorun at system startup, integrate it into the Explorer context menu, set it to minimize to tray, select another GUI language, enable gimmicks (e.g. local weather), as well as set up the file copying behavior (e.g. apply source file attributes to target, set operation on "drag and drop"). FileCommander uses low CPU and RAM, has a fair response time and is compliant with newer operating systems, although it has not been updated for a long time. There are some stability issues, though, such as performing drag-and-drop operations. Unfortunately, FileCommander has been in beta development stage for a very long time, and it doesn't look like the project will be finished anytime soon. I've used FileCommander for the last 4-5 years now, and although it does get

Manage your files! Easy one-click actions. Very useful for beginners. Free version of an older proggy which came in the ME folder. MOD ASSIST Description: For use with Winamp. Powerful playlist manager. Rekapit Description: The software Rekapit is intended to help you in your work as a Webmaster, and to save your time. Its object is to save your time by providing you with a bunch of ready-to-use software. This software includes all kind of applications that will simplify your work. You can get rid of all the work in minutes. The ultimate solution for heavy work. In Rekapit you will find your favorite software to perform all sorts of tasks: - Set up your Internet connection, your router and your modem - Translate a text into several languages - Start your FTP or HTTP server - Analyze images - Create ZIP files and archives - Convert files of different kinds - Convert videos and audios - Split and combine files - Backup and restore data - Change your system date and time - Hide and show files - Reset all your system settings - More... The solution Rekapit offers is customizable. You can get rid of the software you don't use any more and can add the new software you wish to use. To do this you can use the included database which stores all the information about your downloaded software. The online database also includes updates and new features. You can add, delete, and update your applications from the database. You can have Rekapit start or open when Windows starts, you can have it start on a schedule or you can use the Windows Task Scheduler. Rekapit allows you to choose which applications you want to have installed, and which applications you do not want

to have installed. As well as when it will be run. Moreover, you can set it up to automatically start or shut down at a certain time. This allows you to be extremely efficient. If you are working in the Internet and you want to be connected to the world, Rekapit is the software for you. With the software you can set up your Internet connection, and easily change your settings, and even change your default browser. You can get rid of a lots of work by changing your default file association. The software also provides tools that allow you to: 2edc1e01e8
