If you have any suggestions for future versions or if you find JAVaToPHP Project Converter useful in any other way, please let me know by email. One of the best features of this converter is the ability to monitor the progress of the conversion so you don't have to wait until the conversion is completed to view the outcome. The progress bar displays the conversion status in real-time and gives you the opportunity to cancel the process at any time. In addition, the error logging feature is essential for any developer so that you are always able to diagnose problems immediately and save time. The key features include: Monitor the conversion Log all errors (at least one) Generate the source code for individual classes Generate the source code for individual methods Generate the source code for the constructor Generate the source code for the destructor Generate the source code for the (un)serialization methods Generate the source code for the (un)marshalling methods Generate the source code for the exception constructor Generate the source code for the exception destructor Generate the source code for the exception handler Generate the source code for the Exception-specific methods Generate the source code for the exception handlers Generate the
